

2.20 - Let there be Light

At some point, it is believed, [God](#) said/expressed "Let there be [Light](#)." This statement is an [idea](#) or intent some say to experience [Light](#) (to be aware) as an expression of Self's ideas (thoughts). Remember that in the ancient writings [Light](#) always referenced [Light](#) of [Mind](#) as in [Awareness](#), [Consciousness](#) or [Illumination](#). So when [Light](#) came [Awareness](#) came. This first expressed [desire](#) caused a disturbance in the universal equilibrium and [potential](#). The potentially two balanced or neutralized states or desires became slightly unbalanced causing the two forces to move against or around each other. They must move AROUND each other as to move directly against each other would bring about a neutralization of force. One moving away from [centralization](#) and the other moving toward [centralization](#). The two directions mutually cancel one another mathematically but not dynamically or actually. The original [thought](#) that initiated the motion must be at right angles to this in and out direction and may be pictured as a shaft around which whirl the expanding and contracting motions. See [Stria](#), [Vortex](#)
