

Accumulator

Device that accumulates, usually Keely's [Etheric Force](#) or Reich's [Orgone Energy](#).

Keely

"A [dynamo-electric machine](#) is placed at any given spot; its object, being put in [action](#), is to withdraw from the earth its [neutral electricity](#), to [decompose](#) it into its [two conditions](#) and to collect, upon **accumulators**, the [electricity](#) thus separated. As soon as the **accumulators** are [charged](#), the [electricity](#) is disposable; that is, our lamps can be lighted. But what is marvelous in all this is that the [forces of nature](#) can be [transformed](#) at [will](#). Should we not wish for [light](#), we turn a knob and we have [sound](#), [heat](#), [motion](#), [chemical action](#), [magnetism](#). Little seems wanting to create [intelligence](#), so entirely do these **accumulated** forces lend themselves to all the [transformations](#) which their [engineer](#) may imagine and desire. But let us consider how greatly superior is our [cerebral mechanism](#). In order to light a theatre we require a wide space, a [dynamo-electric machine](#) of many horse-power, **accumulators** filling many receptacles, a considerable expense in [fuel](#), and clever [mechanicians](#). In the human [organism](#) these [engines](#) are in miniature, one decimeter cube is all the space occupied by our [brain](#); no wheels, no pistons, nothing to drive the [apparatus](#), we suffice ourselves. In this sense, each of us can say, like the philosopher [Biaz](#):- [Omnia mecum porto](#). Our [cerebral organ](#) not only originates [motion](#), [heat](#), [sound](#), [light](#), [chemical actions](#), [magnetism](#), but it produces [psychic](#) forces, such as [will](#), reasoning, judgment, hatred, [love](#), and the whole series of [intellectual](#) faculties. They are all derived from the same [source](#), and are always identical to each other, so long as the [cerebral apparatus](#) remains intact. The [variations of our health](#) alone are capable of causing a [variation](#) in the [intensity](#) and [quality](#) of our [productions](#). [Keely, [Vibratory Physics - The Connecting Link between Mind and Matter](#)]

Schauberger

These explanations provoked a veritable storm of protest in academic circles, forcing me to equip myself and go into action with somewhat heavier artillery. In response to the objections raised during the preliminary patent assessment, I then submitted the following supplementary explanation:

1. As [inseparable trinities](#), the media of [earth](#), [water](#) and [air](#) are the natural **accumulators** of [bio-magnetic](#) and [bio-electric dynagen](#) concentrates. These are extremely sensitive to [pressure](#) and [heat](#) and may only be accelerated artificially in the original ([primordial](#)) way, i.e. [planetarily](#), wherein [cooling](#) effects must [predominate](#). Any abnormal increase in [heat](#), no matter from what cause, triggers [unnatural interactions](#) between [basic elements](#) at the expense of the [negatively surcharged, biomagnetic dynagen concentrates](#).
2. All [over-illumination](#) and [over-heating](#) immediately provokes the release of [decomposive energies](#); whether [heating](#) is the result of [sunlight](#) or [The Energy Evolution - Harnessing Free Energy from Nature, The Biological Vacuum - The Optimal Driving Force for Machines]

Just a slight [positively surcharged motive](#) or [stimulative influence](#) is enough to [discharge](#) the [blood](#) of the [Earth](#), the extremely [pressure-sensitive accumulator](#) of the true [life-forces](#) in [statu nascendi](#), which it accumulates in order to [transform](#) them into [reactivated formative \(levitative\)](#) or [disintegrative \(retrogressive\)](#) energies. Otis T. Carr

"We use this statement that we use an electrified sender. It's a central power core. Now this is what we call an '**accumulator**.' In a vernacular sense, it is a factory. It is a storage cell, an accumulation of storage cells which provide an electromotive force in the same manner that any known battery produces an electromotive force." [Otis T. Carr]
