

# Cadaverine Poison in Ray-Form - Ptomaine Radiation

## Cadaverine Poison in Ray-Form (Ptomaine Radiation)

9th October 1949, from [Implosion Magazine](#), No. 121, pp 3-12.

"What is the present outlook in the field of energy [generation](#)? One word suffices - catastrophic! Through [over-illumination](#) and [over-heating](#) of the media of [earth](#), [water](#) and [air](#) in [Nature's](#) household, a [short circuit](#) - 'cold fire' - and the development of [cancer](#) has been triggered off. With [nuclear fission](#) a [conflagration](#) was kindled, whose ashes and [slag](#) residues alone will extinguish all [life](#). Thus a reporter stated recently, "For the time being this radiating thing is there and with it the attendant worries as to how we can protect ourselves against these lethal [rays](#), which [penetrate](#) even the thickest [lead shields](#)." The sheer [lunacy](#) of using [nuclear power](#) for peaceful purposes will be just as short-lived as the subsequent [remorse](#) will be long." - [Viktor Schaubberger](#) - [Implosion Magazine](#) No. 56, p.29-30.

## The pressure turbine

On the 16th of May 1913 Prof. Dr. [Viktor Kaplan](#) was able to inform the world's leading [turbine](#) manufacturers that he had succeeded in achieving [rotational velocities](#) and efficiencies with his newly designed [impeller](#), which far exceeded existing norms.

This was confirmed by Prof. [Budau](#) at the test stand on the 22nd of June 1922. With this [Viktor Kaplan](#) saw himself at the [culmination](#) of years-long experimental endeavours, when suddenly an unexpected [setback](#) occurred, causing a severe [nervous breakdown](#) which crippled his ability to work.

When what had been achieved experimentally with the [test model](#) was implemented practically, mysterious [cavitation](#) phenomena appeared, which destroyed even steel [turbine blades](#) within a short space of time.

It was only after protracted and expensive experiments with [alloys](#) that these [decomposive](#) phenomena could be sufficiently inhibited to enable the manufacture of this [turbine](#) system to begin. This was believed and is still so believed today, to be of such great service to industry and the economy, that a few companies licensed by [Viktor Kaplan](#) (because of the lucrative business opportunities) spared no material expense or intellectual effort in order to eliminate these [decomposive](#) effects, which according to measurements were equivalent to peak [pressures](#) of about 32,000 [atmospheres](#) (atm).

29

In this way this dangerous [centrifugence-machine](#) was rescued from [oblivion](#), which [decomposes](#) the [geospheric](#) and therefore [negatively charged mother-water](#) of the [Earth](#) (the true [carrier](#) of [fructigens](#)) in ever wider circles as the [turbine's](#) [rate of rotation](#) rises with increasing [head of pressure](#).

The cause of this [groundwater decomposition](#) is the [emission](#) of [analysing substances](#), namely [cadaverine poison](#) in [ray-form](#) ([ptomaine radiation](#)), which arises from liquefied stocks of [fatty-matter](#) when mechanically-induced [centrifugal pressure](#) and physically [dissociative energies](#) trigger [lower-grade](#) ([expansive](#)) [temperatures](#), i.e. [lower-grade cell vibrations](#), in [molecular structures](#).

Here we are concerned with the consequences of a tragic [error](#) inasmuch as it is generally believed that the [earthly remains](#) of [life](#), which relapse into the [womb](#) of the [Earth](#), purposelessly [decay](#) into dust and ashes when the [soul](#) is supposedly separated from its former [body](#) after its physical [vital functions](#) have ceased.

In reality there are [two mutually opposed fermentation processes](#) ([forms](#) of [inner motion](#)) that determine what is to be created from these [allotropic](#) ([polymorphic](#)) [fat-concentrates](#) entombed in the [Earth](#) along with the [cadaver](#). [Decomposive](#) and [retrogressive energies](#) - the above [ptomaine radiation](#) - are active here, which are generated when the [reversed fermentation process](#) that produces [positively charged acids](#) is triggered by [thermal influences](#) which intensify [internal - rupturing - pressures](#). This is further exacerbated by the [disintegrative](#) effect of [mechanics](#), which bio-logic-ally speaking gives rise to reactivated [centrifugal motion](#). It thus becomes clear that in [Nature](#) there are neither [equivalencies](#), nor any constant [conservation of energy](#) or [matter](#), but only [differentiations](#), which mutually [potentiate](#) one another. [Robert Mayer](#), [Isaac Newton](#) and others

devoid of [intuition](#) - therefore [nature-alienated lawmakers](#) - have seriously erred (exact proof of this exists) inasmuch as in an eternally changing [Nature](#) there are actually no rigid [laws](#), no [domas](#) or [absolutes](#), but only a [rhythmical interplay](#) of energies, which determine the [fate](#) of all [existence](#).<sup>[17]</sup> This is because the products of this [interplay](#), already in an [atomic state](#), have an in-built capacity to [react](#), and are therefore products of [biological development](#).

Just a slight [positively surcharged motive](#) or [stimulative influence](#) is enough to [discharge](#) the [blood](#) of the [Earth](#), the extremely [pressure-sensitive accumulator](#) of the true [life-forces](#) in [statu nascendi](#), which it accumulates in order to [transform](#) them into [reactivated formative \(levitative\)](#) or [disintegrative \(retrogressive\)](#) [energies](#).

Under natural conditions, this very [water](#), like [plant juices](#) or higher-grade [bloods](#), is raised by indirect means to the highest mountain peaks through its

[17] In relation to [Newton's](#) discovery of the [laws of gravity](#), [Viktor Schauberger](#) comments: "I think it would have been much better if [Newton](#) had contemplated how the [apple](#) got up there in the first place!" [[Implosion Magazine](#), No. 35, p 16. — Ed.]

30

inner [levitative forces](#). However, if it is moved and churned up by high-speed [pressure-turbines](#), [hydraulic river regulations](#) or [cascade-like torrent confinements](#), then [lower-grade forms](#) of [charge](#) and [potential](#) give rise to [positively supercharged effluxes of energy](#), which [radiate](#) in all [directions](#) (this can be proven exactly), [pierce](#) through and [discharge](#) all [resistances](#), and through internal [rupture](#), loosen the [water's structure](#), thus corrupting the [character](#) and the [quality](#) of this [dynagen concentration](#) (see fig. 6).

As also happens with rapidly moving tractor-drawn [iron - steel - ploughs](#)<sup>[18]</sup>, this gives rise to [electrolytic dissociative effects](#) and [detonating-gas-like eruptions](#) (so-called [earth-rumbles](#)) over a wide area, which further enlarge the [structures](#) mechanically that have already been pre-loosened up through their inner [excitation](#). That is to say, the above [forms](#) of inner [motion](#) and [excitation mutually amplify](#) one another by way of such [chain-reactions](#), whose [periodicity](#) rises by the [square of the rotational velocity](#). On the one hand the products decisive for [development](#) are [ur-created](#), i.e. the buoyant [atomic forces \(levitation\)](#) that effortlessly overcome all physical [weight](#), and on the other, those [retrogressive energies](#), which [mortify](#) all [life](#) through the [enlargement](#) of the [tissue-structure](#). Therefore either the [cadaverine poison](#) in [ray-form](#) or the [life-elixir](#) in an [atomic state](#) is created, which overcomes all [disease](#).

This explains why, for example, the [resistance to motion](#) increases by the [square](#) of the unnatural ([centrifugal](#)) [rotational velocity](#) in all technical, [hydraulic](#) and [dynamic pressure-](#) and [heat-increasing machines](#). This, however, does not occur if [medial masses \(earth, water & air\)](#) are accelerated 'originally' in the manner of the natural [motion](#) of the [Earth's mass](#) (see fig. 9), namely [centripetally](#) along the [longitudinal axis](#). Such [motion](#), which builds up everything indirectly and maintains the whole [Earth](#) in delicate [equilibrium](#), can be copied in a manner true to [Nature](#) with the aid of very specially constructed and [alloyed devices](#).

[18] See descriptions of the effect of [steel ploughs](#) in [The Fertile Earth](#), Vol. III of the Ecotechnology series. — Ed.

Fig. 9: The natural tripartite motion of the Earth

([click to enlarge](#))

In this case the relatively highest grade forms of **atomic energy** can be developed, which move everything 'originally', thereby imbuing all things with **life**.

Undoubtedly known to the **high-priests** of ancient cultures, these **concentrates** of **noble matter** (**ethericities**) are responsible for the legendary near-absolute abundance of **food** and the **freedom of movement** associated with it. Incidentally, these **concentrates** were also ultimately responsible for the **disaster** of **Atlantis**, referred to as the **Flood** by a circumspect **Church**, which was the result of the careless control of these elemental **levitative energies**. In this respect the **Church** was quite right, because the **negatively potentiated mother-water** (**amniotic fluid**), the physically **first-born**, will be **precipitated** out by these **formative and levitative energies** (there is exact proof of this). It is in this **ennobled carrier-substance**, however, that the **latent** higher-grade **atomic energies** reside, which make naturally ordained **locomotion** possible. These **energies**, however, can be **transformed** into the most developmentally harmful forms of **atomic energy** if, for example, a **cyclotron-like centrifugating device** is employed as the supposedly correct means for producing **energy**. Hitherto it has not been known that **vitamins**, the **concentrates** of **noble matter** (perfectly developed **fat-formations fermented** under the exclusion of **light** and **heat**), which are known to solidify at **death** can be degraded through inferior (**expansively-acting**) influences of **heat** and **light** and are gradually **transformed** into the **atomic ptomaine radiation** mentioned at the beginning. Only recently has so-called **vacuum-distillation** been applied to obtaining high-grade **fat-concentrates** from **essential oils**. For this, however, only **atmospheric-gas-rarefying devices**, **air-suction** or **air-pressure pumps** are used, which can never emulate the processes that wise **Nature** employs for specifically **densifying** these highest-grade **concentrates** of **ennobled matter**. This is the '**Organic**' **vacuum**. Created by a **centripetence-machine**, it **densifies noble matter** through the **co-active influences** of higher-grade **motion** and **contractile stimuli**. That is to say, the moved (**accelerated**) **mass** approaches the **temperatureless** and **feverless anomaly state** (+4°C - +39.2°F), which is only possible through **mass-acceleration** on the **longitudinal axis**. Nor can the **resistance to motion** mentioned earlier evolve during this process for the simple reason that this '**original**' system of **mass motion** and **acceleration**, the **dissociative**, **structure-loosening**, **positive temperature** influences are missing, which would otherwise induce an increase in dangerous **wall-pressures**. It should be noted that it is entirely immaterial whether a **molecular interaction** between **basic elements** is initiated by a **physical** or **metaphysical motion-excitation combination**. In the same way that **social revolutions** arise from **psychological stimuli**, so too can a beneficial **fever** and thus the **healing** of a supposedly incurable **disease** be provoked by a strong inner **stimulus**, or conversely, sudden **death** through a so-called **stroke**, caused by an abrupt alteration of the **inner interaction** between **basic substances**.

The all-decomposing **cadaverine poison** in **ray-form** mentioned at the beginning is produced indirectly and therefore **ur-produced** by every **pressure-** and **heat-intensifying machine** of the relatively highest power. For this reason the **blood-of-the-Earth-centrifugating Kaplan turbine** is one of the first **machines** that must be eliminated as fast as possible. If this is done, it will still be possible at the eleventh hour to arrest an economic and cultural decline with all its perilous political repercussions throughout the civilised world, which will have been caused by the generation of **lower-grade atomic energies**.

### **The suction turbine**

The **suction turbine** (see figs. 30-33) is the most suitable device for countering this event, for it can **ur-produce** the most noble **formative and levitative energies** from **water**, which function at an **atomic** level. It builds up the **Earth's amniotic fluid**, which all today's technical, **hydraulic** and chemo- dynamic **machines**, conveyances and agricultural implements, etc. **decompose**; in particular the high-speed, **blood-of-the-Earth-centrifugating Kaplan turbines** and **Pelton wheels**.

Under the term '**suction turbine**' is to be envisaged an **inverted pressure turbine**. It is an **apparatus** with which **water** can be **densified** mechanically and physically, therefore '**specifically**', at the same time. By being moved in this way, the **anomaly state** so vital to **life**, the **temperatureless** and **feverless** condition of health, can be attained regardless of any **positive temperature** influences.

This 'original' cooling of the flowing water takes place because the medium can be accelerated without being retarded by the direct action of wall-pressures. In this case, therefore, the resistance to motion that normally increases by the square of the increase in velocity - the reactive effect of all centrifugal pressure - cannot develop.

Specially constructed blade-systems are here involved, which swirl the draining water-masses about their own centre of rotation. Under these conditions neither positive, nor negative temperatures can arise. Therefore the water accelerated in this way approaches the anomaly point of +4°C (+39.2°F). It is thus temperatureless and feverless, i.e. it becomes healthy and capable of reproduction and further development.

This form of water movement is therefore the one ur-generated by the blood of the Earth, the liquid that pressure-turbines decompose. This explains why water becomes increasingly scarce where pressure-turbines are operating. Not only do they trigger an x-ray-like emission of radiation (inner heat and light), which destroys the structure and quality of the most vital cell tissue, but in addition they rob the draining old-water of any ability to reproduce and further develop = to increase and ennoble itself, due to the decomposition of its

33

vital subtle-matter concentrates. This is the reason for the deterioration and dying out of water, without which there would be no growth, no life and no restoration of living standards on this Earth, for diseased water = inferior quality life. In regard to the systems of motion outlined briefly above, this results when, via the indirect route of the structure enlargement and character deterioration mentioned earlier, the seed of decay is ur-fertilised in the ur-cell of life by the irradiating cadaverine poison, which arises from the allotropic fat-concentrates exposed to pressure-intensifying forms of water movement.

Precisely the opposite is achieved when water and its vital constituents are accelerated in a suction-intensifying and invigorating type of turbine constructed with special alloys, which densifies the water mechanically and physically, therefore 'specifically'. In other words, a concentrative, structure-reducing, and character-improving synthesising current evolves, which radiates in all directions and also ur-fertilises the substance that the emissions from pressure-turbines decomposes.

The outbirth of this ur-fertilisation is the physically first-born. It is the geospherically negatively supercharged amniotic fluid of the Earth in which, as is the case with all physical forms of procreation, the co-originating spirit is bound, which is also ur-created through the above higher-grade processes of motion and excitation. In the opposite case the most dangerous dynagen concentrate results, which only recently, free of any constraint, is being generated with the aid of an ingeniously designed centrifuge - the cyclotron - for the supposed purposes of national defence.

Produced in suction-turbines, the negatively potentiated ur-product of the cycloidally-moving Earth is therefore the 'original' resurrected entity, which in accordance with Nature's laws must be braked by a corpuscular carrier-substance. Unless this happens it will accelerate out of control and drag everything along with it. (viz. the cataclysm of Atlantis in which the supposed Deluge was triggered by the precipitating out of ur-water at great heights - a process that can be copied experimentally.)

For this reason the suction-turbine must also be braked by heavy operating loads, otherwise it would also over-accelerate and levitate. In this case, in lieu of the familiar resistances to motion, additional rotation and levitational forces evolve through the upsurging bio-magnetic rotary synthesising current.

In both cases we are therefore concerned with supplementary ur-forces having opposite functions, which inaugurate either a progressive economic decline or the opposite. This explains why even the ancient Greeks rejected technology. Derived from the ancient Greek word 'technao', its literal translation means 'self-deceit' or 'self-cheating'. The Greeks preferred the natural labour of slaves in order to spare their evolutionally older descendants from later perils.

In terms of the actual design, the gill-system of the stationary trout should be adopted as a model for the construction and fabrication of the suction-

turbine. This fish, which is known to remain motionless in torrential flows, flees upstream like lightning when danger threatens and in the spawning season floats upwards in the centre of the falling water-masses, which gyrate in cycloid-spiral-space-curves. Possessed of the requisite aids to enhance the potential of the 'original' dynagens, the trout cannot only overcome its own weight, but also the specifically heavy water-masses flowing against it.

In conclusion it is necessary to address in more detail the question: Whence do these gigantic levitational forces actually come? Taking a very large-scale example from Nature, these are the forces that maintain the whole Earth in a fragile state of equilibrium, because they also move in cycloid-spiral-space-curves like every falling filament of water.

The raw material for these atomic developmental products are the earthly remains of former life. Above all, it is the concentrates of fatty-matter which, regardless of any external positive temperature influences, solidify after death. These are subjected to fermentation processes similar to those taking place in the stocks of fatty-matter in plant juices from which, depending on the type of motion and excitation, various acids evolve that give further rise to essential and energetic concentrates. This only happens if no vessels are used, wherein annihilating fire robs these concentrates of their allotropic (polymorphic) trace-elements, namely their concentrates of essential oils, which in such high-grade fermentation processes act like yeasts.

It thus follows that all today's technical, hydraulic and chemo-dynamic machines, conveyances, agricultural implements (ploughs, harrows, disc-tillers, cultivators), dynamos, turbines, propellers, pumps, etc. are developmentally harmful, for apart from their pressure-intensifying shape, they are almost entirely constructed with materials unsuited to Nature's processes. Their use triggers off lower-grade vibrations in molecular structures.

To the catalogue of biological, therefore reactivated, errors in motion and excitation committed by modern nature-alienated science, which has inaugurated the 'other' reaction and which is responsible for the decay and death of everything in existence, the following are to be included:

- The supposedly advantageous 'light-induced' growth in monocultivated plantation forest, which is none other than the incipient proliferation of cancer, triggered by the influences of excessive light and heat inaugurated by modern forestry science;[19]
- The pressure-intensifying cascading of contemporary systems of torrent confinement;
- The loss of tractive force and carrying capacity, and the associated problem of sediment, which has become insoluble;

[19] See references in *The Fertile Earth*, Vol. III of the *Ecotechnology series*. — Ed.

- The silting up and dislocation of the heavy water-masses, which must breach their banks, because the formation and build-up of the reflux (upstream flowing) bio-magnetic products of noble matter that ur-fertilise the water, have been arrested through elimination of the form of motion that produces it. This is how the hitherto inexplicable steadiness in draining water-masses down a variable gradient was lost.[20]

In this fashion all growth was also interrupted due to the shape and material of unnaturally constructed and alloyed ploughs, etc., which resulted in the triggering of reversed reactions in the pressure-sensitive, negatively potentiated and therefore cool fertile nutrient substratum.

Particularly serious mistakes were made through the spreading of blast-furnace slag (so-called artificial fertilisers), whose intensified combustion once again robs the soil of its essential energy concentrates, the congealed oily sweetness, which the de-energised and finely pulverised slag then drags to itself from the surrounding negatively potentiated groundwater. Artificial fertilisers therefore remove the blood of the Earth's formative substances, which it must supply to the plants indirectly for the purposes of further ennoblement. In this way too, those levitational factors were eliminated which triable the specifically heavy groundwater to

maintain its precarious [suspension](#) on steep slopes. From this it can be seen how dangerous are the influences of [fire](#) and the [lower-grade](#), expansively and [explosively](#) functioning [temperatures](#) that arise from [fire-affected masses](#).

This [vaporising heat-form](#), which gradually leads to the [desiccation](#) of the [soil](#), is the best prerequisite for the [development](#) of parasitic [bacteria](#), whose appearance should be taken as a warning sign that serious errors in [motion](#) and [excitation](#) have been made. If these errors can be rectified, then the [parasites](#) disappear automatically, because in a [cool](#) (fresh) [soil](#), only [apathogenic](#) (health-enhancing) [bacteria](#) can survive.

It is therefore ridiculous, for example, to try to treat polluted [water](#) with [chlorine](#), or to eliminate all noxious [life-forms](#) with poisonous [gases](#), which would otherwise disappear automatically by changing the [motive](#) and [stimulative](#) influences. In the opposite case, the [evil](#) will only be reinforced, for through the influence of the above [poisons](#) even what is still healthy will become [diseased](#).

Assuming that from what has been stated the two principal causes of the progressive economic decline and its political repercussions are now clear, all that now remains to be done is to demonstrate the origins and causes of this decline in [quality](#) to the competent authorities.

In more specific terms, this unwelcome state of affairs involves the [disturbance of the interchange](#) of [substances](#) at a [molecular](#) level. In other words,

[20] See references in [The Water Wizard](#), Vol. I of the [Ecotechnology series](#). — Ed.

36

the [alteration](#) of the above [fermentation](#) process at its most [fundamental phase](#). To make this even clearer: [Allotropic oxygen conformations](#) are liberated through [pressure-](#) and [heat-intensifying](#) dynamic [effects](#) or [volume-enlarging thermal influences](#), because the [fat-concentrates](#) with opposite [polarity](#) become [inactive](#) and are maintained in a [passive state](#) under such influences. This results in the inner [fission](#) ([dissociation](#)) of the previously internally [interconnected](#) and highly [evolved](#), therefore extremely [pressure-](#) and [heat-sensitive trace-elements](#), which like [yeasts](#) initiate the process of raw-material [transformation](#) - the [fermentation](#) process described above.

It thus becomes comprehensible that all [motion](#) gives rise to [inner molecular excitation](#), and conversely, that strong [excitation](#) causes a [reversal](#) in the [molecular vibrations](#) (the inner [form of motion](#)).

This explains why, for example, the hitherto [incurable](#) can suddenly be [healed](#) and the hitherto healthy can become incurably [ill](#) (e.g. suffer a [stroke](#)). It also explains the hitherto inexplicable effect of the [water](#) long known to the ancients as [healing](#), or more correctly all-healing [water](#), which 'specifically' [densifies](#) to the highest [degree](#). Such [water](#) carries within it the relatively [highest-grade](#) products of [synthesis](#) derived from the above [higher-grade dissociation](#) and therefore is able to [reprogramme](#) the [molecular fermentation process](#) and thus [specifically](#) to heal the condition of [disease](#) caused by the opposite [primary metabolic processes](#).

In the management of today's [forestry](#), [agriculture](#), [water](#) and [energy](#) resources, [lower-grade interactions](#) between [basic substances](#) are triggered exclusively and without exception. That is to say, [molecular disturbances](#) are caused through the influences of [fire](#) and expansively acting [temperatures](#). These [disturbances](#) immediately [intensify](#) into [chain reactions](#), thereby weakening the [interaction](#) between [basic substances](#) in the whole [organism](#) or actually reverse it. Thus, in accordance with [Nature's](#) inner [laws](#), the [disruptions](#) to [development](#) will become all the more severe, the more modern science, which produces the reversed [motive](#) and [stimulative](#) influences, achieves its phoney successes. In lieu of the 'original' [pressure-less](#) and [heat-less motion](#) of the [Earth's masses](#), it has invented and applied the reversed methods of [motion](#) and [excitation](#).

Those who understand what has been written here will have to agree that we will inevitably become the hopeless and hapless [victims](#) of the scourge of the [technical machine age](#), if we do not eliminate the errors in [motion](#) and [excitation](#) made thus far as quickly as possible, which [ur-produce cadaverine poison](#) in [ray-form](#) the 'specific' means of [decomposition](#), as the end-product.
