

# ENERGY FROM VIBRATORY INDUCTION

The permanence of form and [matter](#) is permitted only by the balanced activity of the three fundamental [modes of vibration](#) at the [neutral center](#) thereby suspending their activity. The continuity of existence of all molecules and therefore of all masses depends on the [molecular neutral center](#) where the fundamental [component vibrations](#) are temporarily held in [balance](#). Should we break up the [equation](#) of these three [modes of vibration](#), we will evolve [latent power](#) into [kinetic](#) energy. By influencing this [neutral center](#), certain orders of vibration can break up the balanced [equation](#), divide the components of the molecules and thereby divide the components of the [mass](#) into the primordial [ether](#), from which the molecules were originally constructed.

There are certain [modes or properties of vibration](#) which can direct the [component vibrations](#) of any [mass](#) to the [neutral center](#) of that [mass](#) "[neutral attraction](#)", "[neutral affinity](#)", "[negative attraction](#)", "[polar negative attraction](#)", are terms expressing the [effect](#) or [resultant](#) of certain combinations of these modes or properties of [vibratory induction](#).

Through study of the [dominant Keely](#) sought to control the power he evolved, by altering the [dominant mode of vibration](#) in the [triplicate flows](#) of force. One of his friends said "*The vibrations used by Keely, which rupture the [molecular](#) and [atomic capsules](#) of [matter](#), must remain THOUGH IN ONE POINT ONLY, a secret with the [discoverer](#) until he has completed his system and successfully demonstrated and patented one invention.*" Therein is where [Keely](#) failed. He was not able to prevent [reversions](#) his machine would not remain in [continuous motion](#).

## Keely

"So stood matters with Mr. [Keely](#) until a few years ago, when, fortunately for his hopes of success, a new [conception](#) came to him by [accident](#), as he asserts; one of those happy [accidents](#), it would appear, which only men of the unusual capacity called [genius](#) are ready to take advantage of. Just what this [conception](#) was, Mr. [Keely](#), with business-like caution, keeps to himself. The public, for the present at least, must be content with its visible results; but these are sufficiently noteworthy to amply repay consideration. They indicate two things: First, that Mr. [Keely](#) is no longer dealing with a [power](#) arising from [gaseous pressure](#); and, second, that he has made this [power](#) capable of producing [rotation](#), [levitation](#), and other effects of [mechanical energy](#). What he claims, in regard to the [source](#) of his new [system](#) of [power](#), is that he is able to draw **vibratory energy** directly from [space](#) by the aid of special [resonating expedients](#), and that this [energy](#) can be made to yield powerful [attractive](#) and [repulsive force](#) and be [converted](#) into vigorous [rotary motion](#) through the use of certain [apparatus](#). The [power](#) obtained, he asserts, is [duplex](#), or has [two opposed conditions](#), like the [positive](#) and [negative](#) states of [electricity](#). Mr. [Keely](#) denominates these [conditions positive](#) and [negative](#), though with the [reservation](#) that these terms do not imply [excess](#) and [deficiency](#), but simply [opposite conditions of energy](#). He is able, he declares, to [disturb the equilibrium](#) of these [opposed states of vibratory activity](#) as they exist in the [elements](#) of [nature](#), to draw them separately into his [apparatus](#), and to produce [mechanical motion](#) as a result of the effort of [nature](#) to [restore the disturbed equilibrium](#)." [Apergy - Power Without Cost]

"Recently some questions, propounded to Mr. [Keely](#) by a scientist, elicited answers which the man of [science](#) admitted were clear and definite, but no [physicist](#) could accept [Keely's](#) assertion that incalculable amounts of [latent force](#) exist in the [molecular space](#), for the simple reason that [science](#) asserts that [molecular aggregation](#) is attended with [dissipation](#) of [energy](#) instead of its [absorption](#). The questions asked were:-

I. "In [disintegrating water](#), how many [foot-pounds](#) of [energy](#) have you to expend in order to produce or induce the **vibratory energy** in your [acoustical apparatus](#)?"

Answer.- "No [foot-pounds](#) at all. The [force](#) necessary to [excite disintegration](#) when the instrument is [sensitized](#), both in [sensitization](#) and development, would not be sufficient to wind up a [watch](#)."

II. "What is the amount of [energy](#) that you get out of that initial amount of [water](#), say [twelve drops](#), when

decomposed into ether?"

Answer.- "From twelve drops of water a force can be developed that will fill a chamber of seven pint volume no less than six times with a pressure of ten tons to the square inch."

III. "In other words, if you put so many pounds of energy into vibratory motion, how many foot-pounds do you get out of this?"

Answer.- "All molecular masses of metal represent in their interstitial molecular spaces incalculable amounts of latent force, which if awakened and brought into intense vibratory action by the medium of sympathetic liberation, would result in thousands of billions more power in foot-pounds than that necessary to awaken it. The resultant development of any and all forces is only accomplished by conditions that awaken the latent energy they have carried with them during molecular aggregation. If the latent force that exists in a pound of water could be sympathetically evolved or liberated up to the seventh subdivision or compound interetheric, and could be stored free of rotation, it would be in my estimation sufficient to run the power of the world for a century."
