

# Law of Assimilation - The Foundation Dynamic of All That Is

## The Law of Assimilation - The Foundation Dynamic of All That Is

[Notes, and thoughts on the subject of polarity and its dynamics]

Throughout [SVP](#), the [sypwiki](#) and [Walter Russell's](#) writings is a reoccurring thread that seems to bear on most everything else. One encounters this thread of thought often and in seemingly different forms or areas of application. [Bloomfield-Moore](#) wrote in [Keely and His Discoveries](#) that this idea, concept, principle, dynamic or law is the [Cosmical Law](#) that is the foundation of all other laws.

"By this law ([Law of Assimilation](#)) a far greater number of the phenomena of nature and the laboratory can be explained than have been otherwise explained by scores of laws which are frankly admitted to be empirical."  
[[Bloomfield-Moore](#), [Veil Withdrawn](#), [Law of Assimilation](#)]

The law is in three parts or functions not unlike as revealed in [Keely's](#)

**Law of Force** "*Energy manifests itself in three forms: [Creative](#), the vibrating aggregate; [Transmissive](#), being the propagation of [isochronous](#) waves through the media in which it is immersed; [Attractive](#), being its action upon other aggregates capable of vibrating in [unisons](#) or [Harmony](#).*" [[Keely](#), 1894]

Male	Sex	Female
Action	Transmission	Reaction
Force	Resistance	Motion
There is the Creator	Action/Ideation/Desire	the Created.
The Doer	the Doing	the Doee
Red	Yellow	Blue
Father	Resistance	Mother

**Polar** The polar dynamic is fundamental to all motion and therefore matter - an effect of motion.

There are only two kinds of motion: syntropic and entropic.

We either add to or take from these two two motions whether dealing with energy or matter.

There is no other action. [See [Laws of Being](#)]

For instance [water](#) (H<sub>2</sub>O) is a prime example of a polar molecular substance.

[Hydrogen](#) in [Russell Table of Elements](#) is +401 - preponderantly syntropic. [Oxygen](#) in [Russell Table of Elements](#) is -502 - preponderantly entropic.

Varying the temperature and/or pressure causes these atomic structures to varying their preponderant dynamic. They can become more syntropic and less entropic or more entropic and less syntropic.

**Polar Interchange** Positive, Syntropy

Negative, Entropy
