

Levitation

Keely

"All **molecular** masses of **terrestrial matter** are composed of the ultimate **ether** from which all things originally emanated. They are sympathetically drawn towards the earth's center, as according to the density of their **molecular** aggregation. In other words, the **celestial** flow as controlling **terrestrial** physical organisms.

The **sympathetic outflow** from the **celestial** streams reaches the infinite depths of all the diversified forms of **matter**. Thus it is seen that the **celestial** flow which permeates, to its **atomic** depths, the **terrestrial** convolutions of all **matter**, forms the exact sympathetic parallel to the human **brain-flow** and the physical organism, a perfect **connective link** of controlling **sympathy** or sympathetic control. Under certain **orders** of **sympathetic vibration**, **polar** and **antipolar**, the attractive sympathies of either stream can be intensified, so as to give the predominance to the **celestial** or to the **terrestrial**.

If the predominance be given to the **celestial**, to a certain degree, on a mass of metal, it will ascend from the earth's surface, towards the **etheric** field, with a velocity as according to the **dominant** concentration that is brought to bear on the negative thirds of its **mass chords**, by inducing high **radiation** from their **neutral centers**, in combination with the power of the **celestial** attraction.

The power of the **terrestrial propulsive** and **celestial attractive** to lift and these conditions reversed, or the **celestial propulsive** and the **terrestrial attractive**, to descend. Associating these conditions with the one of corpuscular bombardment, it is evident to me with what perfection an **air-ship** of any number of tons weight can, when my system is completed, be controlled in all the varied movements necessary for complete commercial use at any desired elevation and at any desired speed. It can float off into atmospheric space as gentle in motion as thistledown, or with a velocity outrivaling a cyclone." John Keely, [Snell Manuscript]

"So stood matters with Mr. **Keely** until a few years ago, when, fortunately for his hopes of success, a new **conception** came to him by **accident**, as he asserts; one of those happy **accidents**, it would appear, which only men of the unusual capacity called **genius** are ready to take advantage of. Just what this **conception** was, Mr. **Keely**, with business-like caution, keeps to himself. The public, for the present at least, must be content with its visible results; but these are sufficiently noteworthy to amply repay consideration. They indicate two things: First, that Mr. **Keely** is no longer dealing with a **power** arising from **gaseous pressure**; and, second, that he has made this **power** capable of producing **rotation**, **levitation**, and other effects of **mechanical energy**. What he claims, in regard to the **source** of his new **system** of **power**, is that he is able to draw **vibratory energy** directly from **space** by the aid of special **resonating expedients**, and that this **energy** can be made to yield powerful **attractive** and **repulsive force** and be **converted** into vigorous **rotary motion** through the use of certain **apparatus**. The **power** obtained, he asserts, is **duplex**, or has **two opposed conditions**, like the **positive** and **negative** states of **electricity**. Mr. **Keely** **denominates** these **conditions positive** and **negative**, though with the **reservation** that these terms do not imply **excess** and **deficiency**, but simply **opposite conditions of energy**. He is able, he declares, to **disturb the equilibrium** of these **opposed states of vibratory activity** as they exist in the **elements** of **nature**, to draw them separately into his **apparatus**, and to produce **mechanical motion** as a result of the effort of **nature** to **restore the disturbed equilibrium**." [Apergy - Power Without Cost]

"The experiment illustrating "**chord of mass**" **sympathy** was repeated, using a glass chamber, 40 inches in height, filled with water, standing on a slab of glass. Three metal spheres, weighing about 6 ounces each, rested on the glass floor. The **chord of mass** of these spheres was **B flat** first octave, **E flat** second octave and **B flat** third octave. Upon sounding the note **B flat** on the **sympathetic transmitter**, the sphere having that **chord of mass** rose slowly to the top of the chamber, the positive end of the wire having been attached, which connected the covered jar with the **transmitter**. The same result followed the sound of the other spheres, all of which descended as gently as they rose, upon changing the **positive** to the **negative**. J.M. Wilcox, who was present remarked: "*This experiment proves the truth of a fundamental law in scholastic **philosophy**, that when one body attracts or seeks another body, it is not that the effect is the sum of the effects produced by parts of one body upon parts of another, one aggregate of effects, but the result of the operation of one whole upon another whole.*" [KEELYS SECRETS - 1888]

Levitation

John Ernst Worrell Keely, 1894

A small instrument, having three gyroscopes as a principal part of its construction, is used to demonstrate the facts of [aerial navigation](#). These gyroscopes are attached to a heavy, inert [mass](#) of metal, weighing about one ton. The other part of the apparatus consists of tubes, enclosed in as small a space as possible, being clustered in a circle. These tubes, represent certain chords, which were coincident to the [streams of force acting upon the planet](#), focalizing and defocalizing upon its [neutral center](#). The action upon the [molecular](#) structure of the [mass](#) lifted was based upon the fact that each [molecule](#) in the [mass](#) possessed a north and south pole, - more strictly speaking, a positive and negative pole, - situated through the center, formed by the three atoms which compose it. No matter which way the [mass](#) of metal is turned, the poles of the [molecule](#) point undeviatingly to the polar center of the earth, acting almost exactly as the dip-needle when uninfluenced by extraneous conditions, electrical and otherwise. The [rotation](#) of the discs of the gyroscopes produces an action upon the molecules of the [mass](#) to be lifted, reversing their poles, causing [repulsion](#) from the earth in the same way as like poles of a magnet repel each other. This [repulsion](#) can be diminished and increased according as the mechanical conditions are operated. By operating the three discs, starting them at full speed, then touching two of them, so as to bring them, according to the tone they represented by their [rotation](#), to a certain vibratory [ratio](#), the [weight](#) then slowly sways from side to side leaves the floor, rising several feet in the air, remaining in that position, and as the discs gradually decrease their speed of [rotation](#) the [weight](#) sinks to the floor, settling down as lightly as thistle-down. Where one [molecule](#) can be lifted, there need be no limit as to the number in a structure that may be operated upon as easily as one. The vessel in contemplation, the [aerial navigator](#), will be over two hundred feet long, over sixty feet in diameter, tapering at both ends to a point, made of polished steel, and will be capable of being driven under the power of [depolar repulsion](#), at the rate of three hundred miles an hour. It can be far more easily controlled than any instrument now in use for any phase of transit. Another very remarkable feature connected with this system of [aerial navigation](#), is that the vessel is not bouyed up or floated in the air through the medium of the air, so that if there were no atmosphere it would float just as readily; hence, under mechanical conditions most certainly capable of production, involving massive strength of resistance to interstellar vacuity this can be made capable of navigating even the remote depth of [space](#), positions between planets where polarity changes being controlled by other adjuncts of concentration for that purpose.

Safely enclosed within this structure, a man possessing the chemical knowledge these new [laws](#) give, with sufficient supply of material from which to make [oxygen](#), by the enormously increased rate of speed attained by such [navigator](#) where atmospheric [friction](#) is avoided, the time occupied in traveling from one planet to another would be amazingly brief, and one can travel to other planets in this system of worlds as easily as the same ship could navigate the depths of the ocean.

The great obstacle hitherto preventing the solution of this problem has been the strength of structure needed under conditions above presented. With this knowledge of [matter](#), the size of structure is unimportant; the heaviest can be as easily controlled as the lightest." [Dashed Against the Rock](#)🔗

Levitation with Radio Waves🔗

Schauberger

The simplest effect of [catalytic opposites](#), i.e. [fine-structured opposites](#) with [inner interuniting properties](#), or more properly having a 'marrying' tendency ([ur-procreation](#)), can best be observed in the [generation](#) of [electric current](#), which is normally only successfully achieved with so-called [dynamos](#) incorporating [rotors](#) made of [paramagnetic metal](#).

Conversely, if [diamagnetic catalysts](#) are used in [dynamos](#) constructed in exactly the opposite way (so-called [Repulsators](#) - see fig. 7 & figs. 24 ->26), then an [upward flowing diamagnetism](#) is produced, which viewed

biologically is to be understood as '**levitation**' ([resurrective](#) or [upsuctional force](#)), during which the follow-up [pressure](#) mentioned elsewhere plays a subordinate role. If the [developmental process](#) is initiated in [reverse order](#), where the [pressural components predominate](#), then super-strong [gravitational forces](#) are freed. [[The Energy Evolution - Harnessing Free Energy from Nature, The Catalysts](#)]

As also happens with rapidly moving tractor-drawn [iron - steel - ploughs](#)[18], this gives rise to [electrolytic dissociative effects](#) and [detonating-gas-like eruptions](#) (so-called [earth-rumbles](#)) over a wide area, which further enlarge the [structures](#) mechanically that have already been pre-loosened up through their inner [excitation](#). That is to say, the above [forms](#) of inner [motion](#) and [excitation mutually amplify](#) one another by way of such [chain-reactions](#), whose [periodicity](#) rises by the [square of the rotational velocity](#). On the one hand the products decisive for [development](#) are [ur-created](#), i.e. the buoyant [atomic forces](#) (**levitation**) that effortlessly overcome all physical [weight](#), and on the other, those [retrogressive energies](#), which [mortify](#) all [life](#) through the [enlargement](#) of the [tissue-structure](#). Therefore either the [cadaverine poison](#) in [ray-form](#) or the [life-elixir](#) in an [atomic state](#) is created, which overcomes all [disease](#). [[The Energy Evolution - Harnessing Free Energy from Nature, Cadaverine Poison in Ray-Form - Ptomaine Radiation](#)]

Cayce

Q.: How was this particular [Great Pyramid](#) of Gizeh built?

A.: "By the use of those forces in nature as make for [iron](#) to swim. Stone floats in the air in the same manner. This will be discovered in '58." [[Cayce](#) (5748-6)]

Q.: By what power or powers were those early pyramids and temples constructed?

A.: "By the lifting forces of those gases that are being used gradually in the present civilization, and by the fine work or activities of those versed in that pertaining to the [source from which all power comes](#)." [Cayce](#) (5750-1)

"A mechanical device might be constructed where a [vacuum](#) even excluding [ether](#) could be drawn and maintained, developing thereby a levitating force; this similar to that force which exerts pressure upward when air is pumped into a steel barrel while submerged below surface of a medium such as water. This levitating force will be utilized in many ways, particularly in so called heavier than [air ships](#), with the result that air navigation will be possible without the use of wings or gas. This correct when the elements must be made so condensed in their form as to prevent the [ether](#) in its finer sense from being, or escaping through the various elements that are ordinarily used for creating such vacuums. That is, a container in which a [vacuum](#) may be made must be of such a CONDENSE element as to prevent [ether](#) from going through the [atomic](#) forces of the element itself, as is seen in that of an electric bulb - this is not a [vacuum](#), only a portion! To the finite mind this is CONSIDERED as such, but were the same character - or these same conditions produced in a DIFFERENT way - THEN these may be made to BECOME an element that would act in that way and manner, see? As is seen at present, [helium](#) becomes the greater usage in containers that may be made; yet these THEMSELVES (This is working from the opposite side, see?) - but were those gases, or those metals used that the supply of [helium](#) itself becomes the container FOR the [vacuum](#) ITSELF, see? this condensed, see? into a metal form, THEN the [vacuum](#) ITSELF, made that would lift without being lifted, see?" [Cayce](#) (195-70)
