

Rife

Royal Raymond Rife (1888-1971)

[click to enlarge](#) ↗

Royal Raymond Rife (1888-1971) born between two (2) ages, contributed significantly to the furtherance and betterment of mankind by introducing a very interesting "novelty of fact" capable of discerning ["seeing"] microbes and viruses in their actual ["living"] condition, thereby enabling him to "analyze" and "discover" how to rid these "organisms" from animals and the human body. By observation, he discovered that these "organisms" had a "crystalline" structure and therefore it was possible to "shatter" them by resonating a specific "frequency" reference "adjusted" and "tuned" to each "organism"s" specific "frequency signature," thus leaving the human cell structure "intact". If you can recall the opera singer who sings a very high note, thereby shattering a "crystal" glass goblet.

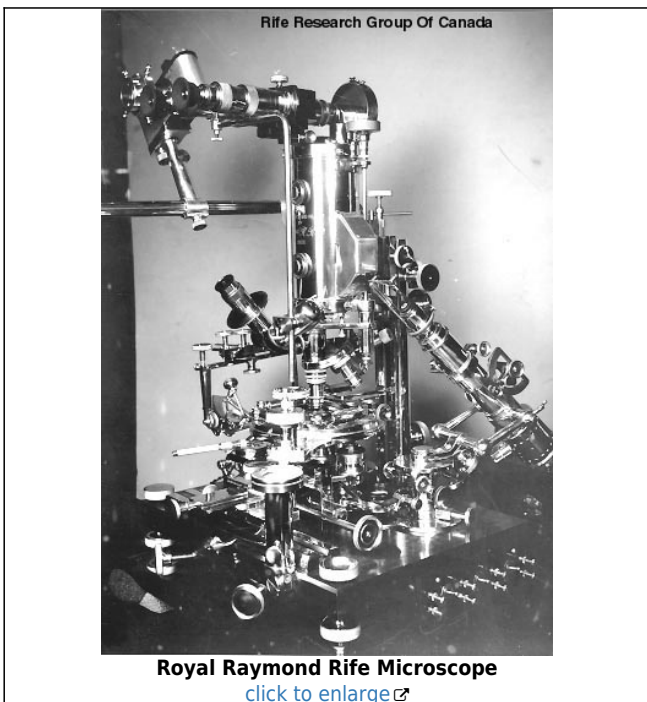

Dr. Rife's contribution was [incredibly] significant and indeed [very] "novel" because prior to his discovery, there was [absolutely] NO capability to "cure" specific [recognizable] "diseases" because they could not be isolated and identified. Dr. Rife's inventions enabled him to "identify," "isolate" and "study" the smallest microbe and apply "specific" frequencies "tuned" to each "individual" microbe destroying [shattering] them where they lived. All of this was initiated during the "horse and buggy" era and brought forward into the 20th Century by very careful laborious study and due diligence under very stringent laboratory conditions and protocols.

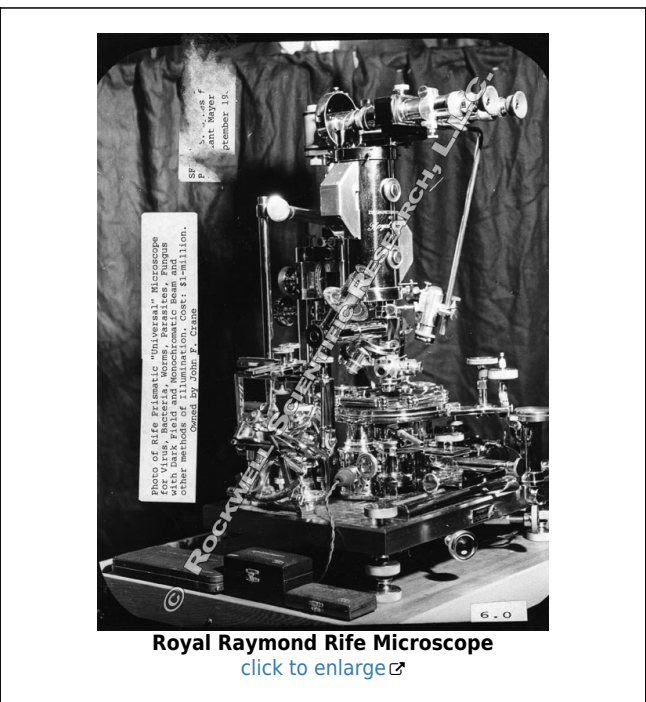

Royal Raymond Rife made the frontpage

[click to enlarge](#)

Let me explain the nature of the dynamics of Rife's "novelty of fact" and why it was a significant accomplishment. First, Rife acquired significant backing and financing, in order to properly finance his "novelty of fact" concept [the creation of a specialized microscope capable of seeing virus's and microbes in their [pristine] [normative] "living" state]. This was many decades before anyone knew about the possibility of an electron microscope, whose **electron level** instrumentation would have obliterated these parasites preventing Rife from viewing [studying] their crystalline structure [nature]. The Rife method was practical and preserved the structure of the viruses, so that they could be [studied] viewed as intact [living] organisms. This required him to dedicate many, many thousands of hours [a significant portion of his life] to first "conceptualize" and then "create" the "mechanism" to enable him to reach his goal of achievement, the Rife Microscope. His microscope was "complex" and required many hours of patient **fine** tuning to adjust it for light [reflection] and proper "magnification." These were "novel" and "complex" rigorous undertakings by a very dedicated and disciplined [persistent] professional, who starting [from scratch] with nothing but an "idea", a "novel" concept, determined to create something that never existed before, in order to cure **rid** mankind of disease.

Royal Raymond Rife Microscope
[click to enlarge](#)

Royal Raymond Rife Microscope
[click to enlarge](#)

Finally after having built the "mechanism," which required great skill, foresight and knowledge of [tool and die machining] mechanics and parts manufacture [remember this was an original one of a kind prototype built to rigorous specifications for specific [[intent] use], he now had the "ability" to "view" and "examine" the very viruses necessary for appropriate "study" and "experimentation" as "living" parasites. He was therefore now able to test and apply the appropriate "tuned" frequency of the specific "frequency signature" of each and every [type and category of] virus known. This was quite an accomplishment, a first, indeed a true "novelty of fact" created by a superb gentleman and dedicated scientist. Dr. Royal Raymond Rife was a pioneer, a man who originated "first thoughts", "first principles", and ultimately laid the "first foundations" in the discovery and ultimately the cure for all diseases. And his success rate was **9astoundingly** significant receiving accolades from his peers and associates alike. He was a true genius, benefactor and a dedicated responsible doctor interested in curing mankind of communicable diseases. And he accomplished and achieved his ultimate goal [single-handedly] after decades of very difficult and laborious effort.

Then the "control paradigm" ultimately took over, destroying his "accomplishments", ridiculing his "discoveries."

Ultimately burying his name, concept, creation, and mechanism. Instead of a well-deserved reward for a lifetime of achievement, he was obliterated as a human being by a despicable "process." He ultimately drowned himself in alcohol in order to suppress the emotional pain of having his life's work trashed. He died in relative obscurity, until now.

It is my hope and prayer that the young grad students, [new scientists, doctors, technicians] coming out of the Universities will ultimately "continue" where Dr. Royal Raymond Rife ultimately laid the "foundations", so that his memory, his sacrifice, and his great work and his NOBILITY will never be diminished but live on in the hearts and minds of succeeding doctors and science professionals.

All the Best,
Leslie R. Pastor

Steven A Ross

My Experience as a Caretaker of Rife's Universal Microscope (1933)

In March of 1986, I received a call at the World Research Foundation from a woman who informed me that I had been killed several months earlier. I had several staff people in the office at the time but I happened to pick up the call myself. She said, "I heard about the death of your co-founders. Did you know them well?"

I asked her what she had heard. She replied, "Yesterday, I went to a gathering at a recreational room at someone's condo. There were about thirty people in the room. We watched a video about Nikola Tesla, starring Orson Wells. Then, a man got up and told the story of Royal Rife and his incredible microscope. He shared that two people, the co-founders of your organization who possessed the microscope, were gunned down in front of their homes. The Rife microscope was stolen, and never seen again."

She then asked, "Did you know them very well?"

My reply was, "I know Steve very well because I saw him in the mirror this morning."

A high percentage of the information existing on many internet sites regarding Royal Rife is very convoluted and inaccurate. The information at some of these sites would be something you would find as a result of the game known as "Chinese Whispers."

Royal R. Rife built one Universal Microscope, his #3, which LaVerne and I received directly from his business partner, John Crane. The Universal Microscope was the world's most powerful light-source microscope. John had befriended Rife in the 1950s and eventually inherited Rife's materials. Rife did build four other smaller microscopes, none as powerful as his Universal, they have been dismantled.

We had the Universal Microscope in our possession for slightly over two years. In addition to the microscope, we received over 500 letters and documents of Rife's research group dated from the 1920s through the 1950s. As a result of possessing these materials, I believe I am familiar with Rife's philosophy, theories, research work and meetings with various people of that era. The microscope exists and is safe.

In the mid-1980s I spoke at several conferences regarding Royal Rife's research. At one of the conferences, I met

Christopher Bird (co-author of *The Secret Life of Plants*) and Marcel Vogel. Both had strong interests in Rife. Some months later, both of them gave us documents they had collected on Royal R. Rife.

In 1986, my co-founder LaVerne and I, appeared on a three hour program on KABC radio, a major radio station in Los Angeles. The program was called *Open Mind*, hosted by Bill Jenkins. It was one of the most popular Saturday evening programs in the United States. The program we did on Rife would be the last show Bill did on KABC. His show was suddenly canceled.

In the early 1990s, various people came up with their Rife treatment devices. Soon after, several people contacted me asking why their Rife machines weren't working. I asked why they were calling me, and I was informed that when they purchased their Rife generators, they had received audio tapes and written copies of my presentations on Royal Rife.

This was unsettling to me since I have never been associated with people building or selling equipment that has Rife's name on it.

At one time we kept the Microscope at our main office in Los Angeles. Several times people came to our office claiming they had the Rife Universal #3 Microscope. I asked why they had come to us if they had the microscope. They replied that they heard our organization possessed information regarding Royal Rife, and if we gave them what we had, it would help complete their information. Obviously, their claim of having the Universal microscope was untrue.

I would like to make it clear that Royal Rife built his original microscopes, which helped lead to his discovery of the frequencies that he used for his original therapeutic machines, in the 1930s. In addition, Rife and John Crane constructed some devices in the 1950s and early 1960s. Rife died in 1971, so he did not build or authorize any of the devices that are currently being sold that carry his name. So, please don't attempt to paste links pushing current equipment with Rife's name.

It is my opinion that Rife and the other researchers were of the highest ethics & skill level and had a profound desire to help humanity. The people associated with Rife in the 1920s and 1930s included, Dr. Edward C. Rosenow of the Mayo Clinic, Dr. Arthur Kendall of Northwestern Medical School, Dr. Milbank Johnson, Dr. Karl Meyer (Univ. of California), Dr. George Dock (Tulane University), Dr. Lewellys Barker of Johns Hopkins, and several other prestigious individuals.

They were not driven by greed, rather their intent was to discover cures for cancer and other diseases and illnesses. They documented their cures of people with cancer during the 1930s. It did work!

I am familiar with many of the present day devices that use Rife's name. When I have been asked my opinion about a specific device, I give the following answer: I would like to see a medical specialist's report, done on the patient before and after treatments. I would also ask, during the use of your specific device, did the patient change their diet; begin meditation; listen to specific healing music; or perhaps begin a visualization program? If they did, then how can you determine exactly what the device has done?

I believe that Rife's work of destroying pathogens using specific frequencies; frequencies determined by various colors that were illuminated through the use of his microscope as well as mathematical calculations, is one of the most profound discoveries of all time. I believe that the use of this system of therapy could change the entire landscape of medicine. Viewing through the microscope, with its unique properties, pathogens related to sixty different diseases and illnesses showed a unique and particular color.

Using the frequency of that color beamed at the pathogen with a frequency generator, it devitalized or destroyed the pathogen using resonance. The researchers knew they had found the proper frequency when they watched under the microscope and the color disappeared from the specimen. It is similar to when a singer hits a note that shatters glass. It was called the MOR, mortal oscillatory rate.

I know that people have had success with current machines that use Rife's name. However, several devices that took Rife's name have been banned in various states, and the Rife name has been blackened. A Wikipedia article on Rife states that people have died using Rife machines, and Rife was a man with unsubstantiated claims. Rife did develop the world's most powerful light-source microscope! I would like to separate Rife, the inventor of the world's most powerful microscope and its discoveries, from current machines that he never personally invented. I absolutely do not endorse any current Rife device or machine. Further information regarding how we discovered Rife, obtained the microscope, as well as original documents from the 1930s, can be found in my book *'And Nothing Happened...But You Can Make It Happen,'* available at www.andnothinghappened.com or at Amazon.

With love, in love and through love.

One of the key starting points for "proof of Rife" in modern times is the TED talk by Anthony Holland, who at the time was a music professor at Skidmore College. By using resonance frequencies generated by the Rife-Bare plasma device, they videotaped paramecium cells disintegrating. Aside from the YouTube video on TED, they've published a few white papers that provide details on their work. This paper below does not address cancer cells, but you can get technological details and concepts.

Theoretical Low Frequency Acoustic Resonances of Various Rife-Bare Plasma Device Antennas, Upon the Destruction of Blepharisma and Paramecium Micro-Organisms Gerard Dubost, Andre Bellossi, James Bare, Anothony G. Holland
White Paper, 7-pages

Requiem for Royal Rife Hubbard Interview

Rife and Gallart suggest that we review this idea:

2. Heterodyning Light

We will first explain the term "**heterodyne**" and then show its application to light as developed by Rife. It is an observed fact in physics, and a principle constantly used in radio and in work with sound, that when two different frequencies of vibration are produced, they inter-act upon each other to produce two new frequencies- one of them is the sum of the two original or fundamental frequencies: The other is the difference between the two originating or fundamental frequencies. Suppose, for example, that in the range of sound, a tone of 400 cycles per second and another tone of 600 cycles per second is produced. The resulting frequencies will then be 200 cycles, the difference between 400 and 600 cycles, and 1,000 cycles for the other new tone, the sum of 400 and 600 cycles.

So far as is known, **Rife** was the first individual to apply this principle to the field of light. [Mark L. Gallert, The Royal **Rife** Report]

Royal Rife: A Pioneer in the Development of Electromagnetic Therapy and Microbiology Royal Raymond Rife (1888-1971) was an American inventor, researcher, and microbiologist who made significant contributions to the development of electromagnetic therapy and microbiology. Rife's work on the application of electromagnetic frequencies to treat diseases and his discovery of a novel method for observing microorganisms have had a lasting impact on the fields of medicine and biology. Rife was born in Elkhorn, Nebraska, and grew up in Iowa. He developed an interest in electronics and mechanics at an early age and began his career as a machinist and inventor. In the 1920s, Rife became fascinated with the work of Louis Pasteur and Robert Koch, and he began to study microbiology and develop new methods for observing and treating microorganisms. Rife's most significant contribution to microbiology was the development of a novel microscope that used a combination of electromagnetic frequencies and prismatic optics to observe microorganisms. The Rife microscope, as it came to be known, was capable of observing microorganisms at a much higher resolution than traditional microscopes, and it allowed Rife to discover new species of microorganisms and study their behavior in greater detail. Rife's work on the application of electromagnetic frequencies to treat diseases began in the 1930s. He developed a device known as the "Rife machine" that used a combination of electromagnetic frequencies and electrical impulses to treat a wide range of diseases, including cancer, tuberculosis, and influenza. Rife's work on electromagnetic therapy was based on his theory that microorganisms could be killed or disabled by exposure to specific electromagnetic frequencies. Despite his significant contributions to microbiology and electromagnetic therapy, Rife's work was largely ignored by the scientific community during

his lifetime. However, in recent years, there has been a renewed interest in Rife's work, and his ideas about the application of electromagnetic frequencies to treat diseases have influenced the development of new therapies, such as electromagnetic field therapy and photodynamic therapy. Royal Rife was a pioneer in the development of electromagnetic therapy and microbiology. His work on the Rife microscope and the application of electromagnetic frequencies to treat diseases has had a lasting impact on the fields of medicine and biology. While Rife's work was largely ignored during his lifetime, his ideas continue to influence contemporary research and therapy. C.K. Lee
