

The Compressed Air Lie

Since [Keely's](#) death the lie (fake news) was created and perpetuated that [Keely](#) used **compressed air** to "dupe his victims". Not much was said about the fact there were no compressors in those days capable of generating anywhere near the [pressures he was liberating or releasing and demonstrating](#). That he was not a fraud was already presented on this page:

[Was Keely a Fraud?](#)

So where did [Keely](#) get the high pressures? In his own words he liberated these pressures from what he termed the "interatomic" realm of matter and energy. Remember that science of his day did not admit the [atom could be split](#). See [Pressure produced by Vibration](#) and related linked pages. In today's parlance that would be our subatomic realm. Modern science has recently identified where he got his pressure - from [protons](#):

Physicists calculate proton's pressure distribution for first time

The particle's core withstands pressures higher than those inside a neutron star, according to a new study.

The [proton](#) (H+) is a light stable subatomic particle. It carries a positive charge [see [entropy](#)] which is considered the basic discharge of [electricity](#). The [proton](#) may also be viewed as a unit of [repulsive force](#) or [entropy](#). <http://news.mit.edu/2019/physicists-calculate-proton-pressure-distribution-0222> ↗

The next time someone gets ahead of "accepted" science perhaps they will be more curious as to what and how instead of slandering because they are too cowardly to admit they do not yet know it all.
