

The Holy Science

I've been entering the material from a new (for me) book titled "**The Holy Science**" by [Swami Sri Yukteswar](#), published in 1898. The intent of this book was to show commonalities between eastern and western [religions](#). While the author did do this what I see is another foundation of Sacred Science or [SVP](#). When we consider the actual [purpose](#) of all true [religions](#) is to reconnect humanity to its [cause](#) and [awareness](#) of who and what we are this book goes a long way to establishing that as also how [non-observable Mind](#) became or created [observable Matter](#) and their interrelations. I highly recommend this book to those sincerely interested in learning about [Self](#) and the universe and your relationship therein and thereto.
