

accumulation

noun: the process by which something increases in amount or is collected together over [time](#)

noun: the amount of something that collects or is collected over [time](#)

noun: the act of accumulating

noun: an increase by natural growth or addition

noun: several things grouped together or considered as a whole

Keely

"In theorizing on the [philosophy](#) of [planetary suspension](#) Mr. [Keely](#) writes:- "As regards planetary volume, we would ask in a scientific point of view - How can the immense difference of volume in the planets exist without disorganizing the harmonious action that has always characterized them? I can only answer this question properly by entering into a [progressive synthesis](#), starting on the [rotating etheric centres](#) that were fixed by the [Creator](#) with their attractive or accumulative power. If you ask what [power](#) it is that gives to each [etheric atom](#) its inconceivable [velocity](#) of [rotation](#) or [introductory impulse](#), I must answer that no [finite mind](#) will ever be able to conceive what it is. "The [philosophy](#) of **accumulation**", [assimilation](#), [Macvicar](#) calls it, "is the only proof that such a [power](#) has been given. The area, if we can so speak of such an [atom](#), presents to the attractive or magnetic, the elective or [propulsive](#), all the [receptive](#) force and all the [antagonistic](#) force that characterizes a planet of the largest [magnitude](#); consequently, as the **accumulation** goes on, the perfect [equation](#) remains the same. When this [minute centre](#) has once been fixed; the [power](#) to rend it from its position would necessarily have to be as great as to displace the most immense planet that exists. When this [atomic neutral center](#) is displaced, the planet must go with it. The [neutral center](#) carries the full load of any [accumulation](#) from the start, and remains the same, for ever balanced in the eternal [space](#)."" [[More Science](#)]

Russell

It is the [contractive power](#) within [electricity](#) to divert the [universal constant of energy](#) into centripetal vortices of closing spirals of increasing speed, thereby attracting similar states of [motion](#) into an **accumulation** of [mass](#) the [pressure](#) of which increases toward its [center](#). [See [Sympathetic Negative Attraction](#)] [[The Universal One, Book 02 - Chapter 12 - Gravitation and Radiation, Gravitation and Radiation - page 141](#)]

It is an expression of the power of [electricity](#) to accumulate by [induction](#) and, by so doing, to force [magnetism](#) to increase its [resistance](#) to that **accumulation**.

It is the [inductive force](#). [See [Cohesion](#)]

It is the [desire](#) within the [electric force of action](#) to integrate into the appearance of form.

It is the power of [electricity](#) to associate by [displacement](#). [[The Universal One, Book 02 - Chapter 12 - Gravitation and Radiation, Gravitation and Radiation - page 141](#)]

"Positive electricity is force generated against [pressure resistance](#). Positive intensity increases with [contraction](#) due to [pressure resistance](#) in [streams flowing in opposite directions](#). Positive electricity is the **accumulating**, [absorbing](#), [endothermic force](#) of [contraction](#) which seeks [higher pressures](#)." [Russell, from chart: [The Cosmic Pendulum](#)]
