Keely

The Neutralization of Magnets

"Thus, either present *elements* are the true *elements*, or else there is the probability before us of obtaining some more high and general *power of nature*, even than *electricity*, and which at the same time might reveal to us an entirely new grade of *matter*, now hidden from our view and almost from our suspicion. - [FARADAY]

Question. How can a *magnet* be robbed almost instantaneously of its *magnetic power*?

Answer. The peculiarity of the *sympathetic conditions* which *conserve* a *magnet* to *polar and anti-polar currents* of the *earth*, prove perfect *sympathetic equation* between *reception and distribution* in that part of the *electrical field* which is classified, in *my system*, as *interatomic vibratory oscillation*.

This *oscillation* represents, in its *corpuscular field of action*, an *alternating wave-motion* of *one hundred and twenty-eight thousand four hundred vibratory exchanges per second*, between *polar reception and depolar distribution*, thus establishing its perfect *sympathetic concordance* to that *third* of the *electric triple stream* which represents the *sixths* in *vibratory sympathetic physics*. The *sympathetic action* of the *magnet*, when *electrically sensitized*, becomes *subservient* to *polar attraction* as a *medium* through which a portion of its *flow* is *diverted*; no longer *latent*, but highly **active** as long as its *magnetic sympathy* (as electrically *induced*) continues, and it will then *associate* itself with every *medium* in *nature* in which this *element* exists in its *latent state*, from *steel* to *oxygen* at a low *temperature*.

We have now reached a starting-point from which to obtain a *conception* of the manner in which a *magnet* can be *neutralized*, that is, robbed of its *coincident unity*, or *subservience* to *polar negative attraction*." [The Operation of the Vibratory Circuit]

"*Macvicar* foreshadowed the teachings of this new *philosophy* when he wrote, "All *motion* in the universe is *rhythmical*. This is seen in the forward and backward movement of the *pendulum*, the ebb and the flow of the tides, the succession of day and night, the *systolic* and *diasystolic* action of the *heart*, and in the *inspiration* and *expiration* of the lungs. Our breathing is a double *motion* of the universal *ether*, an **active** and a *reactive* movement. This *androgynous* principle, with its dual *motion*, is the *breath of God* in man. The writings of the ancients teem with these ideas, which have been handed down to us from generation to generation, and are now flashing their *light*, like torches in the *darkness*, upon mysteries too long regarded as "lying outside the domain of physical *science*." [Bloomfield-Moore, see *Father-Mother Principle, Neutral Center*]

Russell

DIMENSION CHART No. 5. DISTANCE DIMENSION OF TONAL RELATIONS. ALL MASS HAS A MEASURABLE TONAL RELATION TO ALL OTHER MASS. ALL POTENTIAL OF ENERGY IS **ACTIVE**. ORDERLY DISPLACEMENT OF INACTIVE INERTIA, THE RATIOS OF WHICH ARE MEASURABLE IN ALL DIMENSIONS [Dimension Chart 5]

DIMENSION CHART No. 7. STABILITY IS THE INACTIVITY OF A STATE OF EQUILIBRIUM. MOTION IS **ACTIVE** AND OPPOSED TO EQUILIBRIUM. ALL MOTION IS RELATIVELY UNSTABLE. STABILITY OF MATTER IN MOTION MAY ONLY BE SIMULATED BY THE UNION OF EXACTLY EQUAL AND OPPOSITE PLUS AND MINUS DIMENSIONS. [Energy Displacement]

Schauberger

Professor *Sauerbruch* was unaware that this *vacuum* comes into being through the *planetary movement* of the *blood*. Had he known, then *medicine* would have taken a completely different course.

I was further able to prove that because contemporary machines operate using *centrifugence*, *resistances to motion* with a *reactive function*[12] are

11 Here the German word is 'Qualitatstoff', which literally means 'quality-matter, or substance'. With this Viktor Schauburger intended to describe a higher, 4th or 5th dimensional magnitude of pure quality as a thing in itself and as the driving force in the raising of quality of whatever kind as a 'quality-producer' or 'quality-generating substance' or energy. The English expression term 'qualigen' used here, is a contraction of the two words 'quality' and 'generator'. — Ed.

12 **Active** and reactive energies, temperatures, etc.: '**Active**' essentially relates to the more physical dimension, to what is outwardly physical and perceptible, physically palpable, gravitationally affected or oriented, and life-negating, i.e. to energies that tend to curb, limit and brake life, evolution and development. 'Reactive' on the other hand relates to more metaphysical dimensions, to what is inwardly physically intangible, levitationally affected or oriented, and life-affirming, i.e. to energies that tend to foster, re-animate and accelerate life, evolution and higher development. - Ed. [The Energy Evolution - Harnessing Free Energy from Nature, The Biological Vacuum - The Optimal Driving Force for Machines]

Therefore it is also a mistake to believe that plants breathe in carbon dioxide and breathe out oxygen, which can be proven as follows: If the tips of enclosed stands of conifers are observed on very warm and windless days at about noon, then delicate transparent wraiths of mist can be seen, which waft upwards and disintegrate on exposure to excessive light and heat.[15] This is a sign that decentering forms of emulsion are taking place. That is, the upwardly radiating carbon dioxide, which become passive (inactive) with strong light and heat, are being bound by the aggressive oxygen influence, which happens under a negative (rising) temperature gradient. In my own experience this also leads to the drying up of high-lying true springs, which can only rise under conditions where the oxygen is in a diffuse state. If these vapour formations appear above the tops of the trees, then it is certain to rain after about 4 hours. This prompted watchful foresters of old, who were close to Nature, to pack a raincoat in their rucksacks for the afternoon shift. If the opposite emulsive process takes place, i.e. if the downwardly radiating terrestrial energy, which becomes highly active under a positive (falling) temperature gradient, binds the excess oxygen, which becomes passive [The Energy Evolution - Harnessing Free Energy from Nature, The Catalysts]

In Nature both temperature groups are active. Group A provides for the progressive build-up of what is suitable for higher development. Group B is responsible for the precipitating out, breaking down and disassembly of everything unfit for such purposes. This has to be removed and as a life-form must be annihilated, or expressed more correctly, reduced to the relatively lowest developmental state, prior to attempting a renewed ascent under entirely different influences. This temperature-group also becomes active when any given life-form has fulfilled the purpose of its existence, its duty to multiply itself physically or further develop itself. Withering away through decrepitude, and as an over-ripe product of raw material, it is then made available for the build-up of qualigen with the aid of A-group temperatures (T1 - Schauburger). However, if for any reason B-group temperatures (T2 - Schauburger) become active in the deceased substance, it will be putrefied, combusted or otherwise destroyed. [The Energy Evolution - Harnessing Free Energy from Nature, Bio-Technology: Active and Reactive Temperatures]

It is really not immaterial whether motion must first be active in the production of a temperature, which on its part triggers a reactive increase in motion, or whether a temperature induced by physical, thermal or chemical means affects physical movement by way of the molecular motion. The matter first becomes complex, however, when the different temperature-forms mentioned earlier are included in the equation, wherein it is also necessary in regard to the types of motion, to differentiate between those that produce the 'higher' or 'lower' temperature-forms. [The Energy Evolution - Harnessing Free Energy from Nature, The Life-Current in Air and Water]

However, if the mechanical starting impulse is activated first, which must be produced in appropriately contoured development-facilitating devices, then higher cold-forms arise through which the fatty-matter (carbon dioxide or sweet matter), which reacts to centrifugence,[11] becomes free, unipolar and highly active. In this situation the oxygen, which becomes passive under this influence, is consumed (bound), providing it has been dosed (dispersed) mechanically and made palatable (thinned out), (viz. the swaying and fluttering branches of plants). [The Energy Evolution - Harnessing Free Energy from Nature, The Life-Current in Air and Water]

In [Nature](#) both [temperature-groups](#) are **active** in every healthy [organism](#).

This is necessary because the [formative](#) and [uplifting levitational essences](#) evolve from the [higher temperature group A](#) and the [purging dissociative](#) [[The Energy Evolution - Harnessing Free Energy from Nature, The Life-Current in Air and Water](#)]

[11] This seems to conflict with statements made elsewhere, which attribute [intensified carbone activity](#) to [centripetence](#) ([outside—>inward motion](#)), and [intensified oxygen activity](#) to [centrifugence](#) ([inside->outward motion](#)). In actual fact for each of the two [substances](#) there are two [opposite 'reactions'](#) involving [centripetence](#) and [centrifugence](#). [Oxygen 'reacts'](#) to [centrifugence](#) by becoming [aggressive](#) and ['reacts'](#) to [centripetence](#) by becoming [passive](#). Conversely [carbone 'reacts'](#) to [centrifugence](#) by becoming [passive](#) and ['reacts'](#) to [centripetence](#) by becoming highly **active**, as is also affirmed on the following page. — Ed. [[The Energy Evolution - Harnessing Free Energy from Nature, The Life-Current in Air and Water](#)]

The very specific [molecular motion](#) mentioned in the opening paragraph is what is decisive here. More particularly, a [mechanically induced outside-inwardly directed impulsive force](#) is required, through which, aided by [supplementary influences](#), [Nature's principal formative substance - naturalesquely fermented, etherised fatty-matter \(carbones or sweet-matter\)](#) - becomes [free](#), [unipolar](#) and highly **active** and is able to [overpower](#) its [opponent](#), which becomes [passive](#) under these [influences](#). [[The Energy Evolution - Harnessing Free Energy from Nature, The Life-Current in Air and Water](#)]

However, if a [physical, thermal or chemical starting impulse](#) is first **active**, which [influences](#) the [molecular motion](#) in such a way that the [oxygen](#) becomes [free](#), [unipolar](#) and [aggressive](#) due to the [resurgence](#) of [positive, group B temperatures](#), then having been forced into the [centre](#) of this [combat](#), the [principal formative matter](#) will become [passive](#) and will be [bound](#), [consumed](#) and [digested](#). The [product](#) of this event is the [developmentally harmful cavitation current](#) - a variety of the so-called [electric current](#) - which as an exceptionally [analysing current](#) not only pits and corrodes [steel turbine blades](#), but also [decomposes](#) and [dissociates](#) the [blood](#) of the [Earth - water](#). [[The Energy Evolution - Harnessing Free Energy from Nature, The Life-Current in Air and Water](#)]

This [two-fold interplay](#) of [perpetual motion](#) can be directly observed and studied in deep, [cool cellars](#), for through [differences](#) in [temperature](#), what has grown large in the [Sun](#) and then reduced in size by [squashing](#), will be moved ['cycloidally'](#) in the [cellar](#). First [refined](#), then made ['cloudy'](#), it slowly becomes [clear](#) after [termination](#) of this [adolescent period](#). This is how wise [Nature](#) operates, who is known to have unlimited [developmental periods](#) at her disposition for all things. We, poor souls, to whom only a single, unique [life](#) is available in which we will also be forced to make use of [cycloid-space-curve-motion](#) in order to alleviate almost intolerable [reactive energies](#) through their [abreaction](#), will have to behave more sensibly in order to become somewhat more [blissful](#) while still on this [Earth](#) than has been the case due to the efforts of ['active' technicians](#). In other words, we must [reverse](#) the way things are done. [Cycloid-space-curve-motion](#) must therefore be given pride of place, which logically leads to the almost [cost-free mechanical generation](#) of [reactive differences](#) in [potential](#), which in turn give rise to increased and [intensified active differences](#) in [motion](#). Harnessed once more, these [trigger](#) further [high-grade differences](#) in [potential](#) of a [reactive](#) nature, and so on and so forth until [temperatures](#) and [reactive forces](#) of such a kind are [triggered](#) that it is a veritable [art](#) to devise an operating [load](#) heavy enough to [brake](#) and [control](#) these [elemental suctional and pressural forces](#). At the right time, therefore, we must keep our eyes open for the [specialists](#) and [experts](#), who [function](#) as [super-brakes](#) on [development!!](#) Most certainly, however, we must replace those, who today [brake](#) the normal course of [development](#) with the [reversed interplay](#) of [forces](#), which they do in such a way as to increase and [intensify](#) precisely those kinds of [energy](#) that promote [decomposition](#) and the [expulsion](#) of what is unsuitable for further [development](#). In so doing they [trigger](#) a form of [perpetual motion](#), because here too the [self-intensifying decomposive](#) and [repulsive forces](#) also increase by the [square](#) owing to the [cycloid-space-curve-motion](#) of the [Earth](#). Sadly they do not see what they have themselves created, namely boundless [decline](#) and [disintegration](#) instead of an equally [[The Energy Evolution - Harnessing Free Energy from Nature, New Forms of Motion and Energy](#)]

In General

In the same way that it would be impossible, for example, for [human beings](#) and [animals](#) to [reproduce](#) and further [develop](#) ([increase](#) and [qualitatively improve](#)), were [Nature](#) not to enforce an [interaction](#) between their

primary sexual substances through intolerable urge-driven differences in tension, which function reactively, there would likewise be no possibility for the reproduction and further development of plants, minerals and metals, and the physical (**active**) forms of heat and cold. Today's science is not only founded on a false developmental basis, but also on too low a level of knowledge. It ignores the formative reaction and using combustion processes gives pride of [The Energy Evolution - Harnessing Free Energy from Nature, The Practical Application of Cycloid-Space-Curve-Motion arising from Processes of Cold Oxidation]

But now to the example mentioned earlier: In the 'normal' course of cellar fermentation two different (reactive and **active**) temperature differences (this two-fold concept will be described later) trigger off that special form of motion which, after the expulsion of the less valuable in two opposite directions, gives rise to ethereal energetic matrices that also operate in the same two directions. A destructive force that self-intensifies by the square is **activated**, whose function is to return to the Earth as quickly as possible, everything that would inflict damage on that which explains all life and movement, and which moves in the other direction (vertically) towards its objective. [The Energy Evolution - Harnessing Free Energy from Nature, The Economy Founded on Reactively Produced Energy]

already very shaky scientific edifice would come tumbling down, if the full scope of the reactive energy economy should become known too quickly. An upheaval of such a kind would then arise, which could not be endured in these days of food shortages, and the baby would be thrown out with the bath-water by those, who have only one idea left: somehow to struggle through life and to be free of all problems. Were this implemented, however, then the most marvellous things would come to life again, which compared to the present world situation would be a paradise. The trick therefore is - how do I tell the innocent children that the end has come for all manner of lusts for power, because a natural power is now appearing, before which everything else must unconditionally capitulate. Today this new power rejoices over the victory, which was brought about by the fact that the Germans - and this can be examined from any desired viewpoint - were unfortunately the best exponents of a technology founded on faecal matter. Unhappily they exploited precisely those explosive energies that enable us, for example, to rid ourselves of those substances so vital to the Earth for maintaining the eternal renewal of her motive forces. With the aid of these earthly and other waste materials she recreates everything anew, which our evolutionally older descendants absolutely require for their various necessities of life. For this reason wise Nature will not hesitate much longer before she clears everything off the green dissection-table with a single sweep of the hand, as it were, upon which, using decimal scales and an inch ruler, attempts were made to discover the 'essence', namely, that which provides for the weight and measure of all things. And thus, instead of specific elements they found absolutely heavy remnants, which they then declared to be 'atoms'. That these remnants of a former organic whole, which have been artificially rendered potential-less (stripped of life-force, so to speak), interact in a lively fashion, is quite obvious. Under no circumstances, however, do the products of synthesis that produce higher quality products come into being in this way, but only **active forms** of heat and cold. These promote the process of decay through further interactions, which in turn give rise to the decomposive and retrogressive factors that promote an accelerated disintegration as well as the annihilating energies that intensify by the square. That these energy-forms, which foster decomposition and are possessed of a force of resistance that increases by the square, contradict the irrational assumption that they actually further the build-up of culture, is perhaps only incomprehensible to those who know nothing of the specific counter-elements and who, because of a tragic error, established the crowning law of contemporary technology, such that under all circumstances the resistance must increase by the square of the velocity. The specific counter-form, the upward falling weight as it were, comes into being when etherialised substances are transferred to the 4th dimension. This happens, due to the fact that negatively potentiated constituents of carbonic [The Energy Evolution - Harnessing Free Energy from Nature, The Economy Founded on Reactively Produced Energy]

acid are bio-centrifugated with the aid of cycloid-space-curve-motion and so strongly expanded by mechanical means, that they become free, unipolar, cool and highly **active** in a kind of ray-form. They consume (bind) the oxygenes which become inactive due to the effect of this reactive temperature influence, when these seminal substances[6], which concentrate around the longitudinal axis are dispersed mechanically. In this way they are made palatable as it were, in a manner similar to branches which, swayed up and down by the wind, prepare or pre-masticate the food for the young saplings growing under the protection of the mother-trees. The ultimate

products of this digestive process are the high-grade forms of fructigen which, through a progressive series of transformative and formative processes, are produced in similar fashion, when one entity is consumed by a higher one, which in turn falls victim to an even higher lover. The fructigens thus produced are finally consumed by the Earth herself, who gives upward birth to primary products of synthesis, which are created through a progressive series of interactions involving the etherealisation of former fatty-matter derived, for example, from naturalesquely broken down and transformed worm-fat. This etherealising process then ur-produces the more highly influential substances in an energetic state, which the community of worm descendants once more brings to life and moves 'originally'. [The Energy Evolution - Harnessing Free Energy from Nature, The Economy Founded on Reactively Produced Energy]

This perpetuum mobile is also involved when the developmental process is intensified with Repulsines and, for example, the substances contained in the air are subjected to the fermentation process outlined above. In this way the same thing is achieved practically and factually, but in a slightly different **active form**. In the same way that the end-products influence the more basic factors and cause them to move, they also cause them to be displaced upwards at cyclonic speeds; a process that also gives rise to reactive forms of temperature at the same time. Using these reactive temperature-forms the floor can be made warm in a rational way. In spite of the forces that help us to overcome our own body-weight so effortlessly, providing both metabolic processes [The Energy Evolution - Harnessing Free Energy from Nature, The Economy Founded on Reactively Produced Energy]

function unimpededly, we still have to creep and crawl around on this floor in a way that houseflies cannot emulate, which are perhaps the only beneficiaries of these incongruous conventional methods of heating. These methods will also almost completely exhaust the reserves of coal, which is no longer available in sufficient quantity, or is impossible to deliver to the point of use with the present means of transport (the true energy-gluttons), even if sufficient quantities were available for this coming catastrophic winter [1945-46]. It is therefore understandable that those who are threatened with freezing to death and starvation will fall upon this new method of heating and transport like beasts of prey, unless the matter is put in hand with extreme caution. This is the principal reason why heating with mineral substances, with which reactive temperature-forms can be produced virtually without cost, must be inaugurated with great care. These reactive temperatures are activated merely when various allotropic substances are gently stimulated by **active** heat influences. [The Energy Evolution - Harnessing Free Energy from Nature, The Economy Founded on Reactively Produced Energy]

In an already higher form as invisible suspensions, these same substances are contained in the carrier of life-substances - water - and can be made free and **active** with the use of Repulsators. In their relatively highest evolved form these bacteriophagous threshold stocks are to be found in the air. These indifferent elements of intermediate substances can be liberated by means of cycloid-space-curve-motion in so-called Repulsines, resulting in the intimate fusing of the former carrier-substances, which exit from the lower end of the apparatus, and immediately interact with the surrounding difference-matter, namely substances of a highly polarised nature. This leads to the formation of new juvenile air, which strives to displace itself upwards, because this increased, qualitatively-improved, evolutionally-older air cannot mix with the surrounding older air-masses, which have a different potential. [The Energy Evolution - Harnessing Free Energy from Nature, The Economy Founded on Reactively Produced Energy]

the absolutely indispensable resistance for all motion. As the formative velocity rises, the resistance increases commensurately in order to provide the additional frictional (resisting) surfaces required by the accelerating matter. The actual loss of formative energy associated with this amounts to about 4%, i.e. in this case approximately 96% of the formative energy (= magnetism streaming upwards at enormous speed = levitism) is freed, which sucks up its generating device and a portion of its immediate environs in its wake. In other words, the 'all attracting' comes into being and becomes **active** with elemental ur-force. [The Energy Evolution - Harnessing Free Energy from Nature, Magnetism is the Function of Levitism and Electricism is the Function of Gravitism]

If on the other hand a tripolar mass is split up by suction-intensifying and temperature-reducing dynamic influences, then the true creative substance (sweet matter) will be exposed to revitalising (cooling) temperatures. In this case the formative (levitative) sweet-matter becomes free, unipolar and so highly **active**

that it binds, consumes and digests the oxygen (fertilising substance), which has become passive under this other dynamic influence. The end product of this magnetolytic dissociation is the predominantly magnetically charged ion, whose original formative and levitative force, which as everything else in Nature is to be understood as an indirect effect, can be intensified by up to 96%. Imbued with levitative force, these ions suck up the inferior matter and the generating device in their wake with elemental ur-force and encounter the natural and therefore higher-grade forms of inwardly falling (impanding) and concentrating (condensing) heat and light moving in the opposite direction. The product of this partial concentration, which has been solidified through these higher-grade counter-influences is what is known as 'growth', (see fig. 15) [The Energy Evolution - Harnessing Free Energy from Nature, Magnetism is the Function of Levitism and Electricism is the Function of Gravitism]

The more strongly the attracting forces become **active** in the developmental process, the greater the quantity of ennobled magnetolytes (ascended and magnetically supercharged ions) that soar upwards with their adherents and the greater the quantity of less valuable substances expelled by the highest-grade elements which have to solidify under the effect of the counter-influences described earlier. And thus through the proper regulation of these magnetolytic dissociative processes, the increase and qualitative improvement of the aforesaid product of solidification, or growth, can be enhanced at will. [The Energy Evolution - Harnessing Free Energy from Nature, Magnetism is the Function of Levitism and Electricism is the Function of Gravitism]

The plus and minus elements dissociated from the water separate from one another. The small quantities of carbone present in poor quality water make their escape immediately, because they dematerialise themselves. The phos-elements[3] incorporated by the Sun disperse, enter the horizontal potential field, become highly aggressive, spread themselves over the **active** substances and await things now imminent. The 'imminent' is a geospheric gas, which is ingested with great cold. [The Energy Evolution - Harnessing Free Energy from Nature, Letter to Werner Zimmermann]

[10] The following excerpt from "Pregnant Water" (Schwangeres Wasser) in Implosion Magazine, No. 117, pp. 60-61, explains this process:

"It is a known fact that no free oxygen is present at normal temperatures, but that in the form of ozone it is loosely bound to nitrogen in the ratio of 3O₂ to 6N₆.

Were it otherwise, then it would not be beneficial to living things. It is only at +40°C (+104°F) that the individual O₂ molecules appear, which trigger life-threatening chemical reactions in the human body and are the cause of heat-stroke for example. At about 1,000°C (1,832°F) single-atom molecules of O, identical to the oxygen atom, appear, which naturally have very specific effects. This is why, despite the hermetic seal, the high pressure in high-pressure boilers drops to medium pressure once the above atomic transformation has taken place.

Similarly, it is a fact that N (= nitrogen) is not a uniform basic element, but in reality is CH₂, i.e. a carbone composed of He₃ (helium), wherein two atoms of hydrogen play the role of carrier-substance as it were.

Furthermore, it is known that gaseous water and liquid water are quite different things. Gaseous water is OH₂ and liquid water (OH₂)₆. The strong action of gaseous water, for example, follows from this, because two free action quantities or points become **active**, whereas liquid water has no action quantities, because all the action points are filled with H." [Viktor Schaubberger].- Ed. [The Energy Evolution - Harnessing Free Energy from Nature, The Liquefaction of Coal by Means of Cold Flows]

insulation against heat are bound into the water, which is swirled in towards the central axis by the inclined angle of the resistances - guide-vanes.[4]. Having been drawn there by the increase in axial velocity, the water-masses inwinding towards the central axis now bind the highly **active** dynagens, which have been released through the mutual abrasion of the carbones. No longer reacting to any mechanical centrifugence, these energised terrestrial elements then begin to encircle the centrally moving oxygenes. Through the continuous approach of the through-flowing water-masses towards the anomaly point of +4°C (+39.2°F), on the one hand the terrestrial elements attain their relatively highest energetic state and on the other, the oxygenes become increasingly indifferent and more dispersed, thus reaching the condition proper to a fertilising substance. If this state is reached at the anomaly point, then the highly energised terrestrial residues (the former carbones) bind their fertilising counter-parts, and the naturalesque product of synthesis is complete.[The Energy Evolution - Harnessing Free Energy from Nature, The Liquefaction of Coal by Means of Cold Flows]

Cayce

"Best be **active** and in **error** than not doing anything at all." [Cayce 262-126]

Christ Returns - Speaks His Truth

"For you to fully understand what I am talking about, I want you to strive to **VISUALISE & REALISE** that the Nature of **Divine Consciousness of Universal Equilibrium** is limitless Power, since the **equilibrium-harmony** arises out of equal **constraint** between the **universal impulses** of the:

the **male** and **female**,

intelligence and **love**,

the **will** to experience and the **will** to remain acquiescent,

the **yearning** to be **active** and the **yearning** to hold back and maintain the status quo,

in order to form bonds and stability." [Christ Returns - Speaks His Truth, Letter 7, page 166]

"Bear in mind, at all times, that your **SOURCE of BEING** is in two states -

in **equilibrium** and **activity**.

The **ACTIVE** state of your **SOURCE of BEING** is the **dimension** in which you have been conceived and given **individualization**.

The **EQUILIBRIUM** of **UNIVERSAL CONSCIOUSNESS** is the **dimension** of perfect **silence** and **stillness**, in which the underlying **IMPULSES OF CREATIVITY** are locked together in an embrace of **mutual restraint**." [Christ Returns - Speaks His Truth, Letter 9, page 8]
