

calcium

Russell

"Beryllium, in the 4th octave, which has a pressure intensity of 32,768, begat magnesium, which has an explosive pressure intensity of 262,144. Magnesium begat **calcium**, which has an explosive pressure of 2,097,152. **Calcium** begat strontium, at 16,777,216 units of pressure. Strontium begat barium, at 134,217,728, and barium begat radium which has accumulated the enormous power to eject its bullets of 1,073,741,824 times that which it had at birth 9 octaves back." [Atomic Suicide, page 39.]

"It is also this power of penetration and speed of the 9th octave which not only unlocks the pressures of the lower inert gases, octave by octave, but also unlocks the pressures of the 8th, 7th, 6th and 5th octaves of radioactive elements. Most deadly among these are radium, thorium, actinium, strontium, barium, **calcium**, potassium, arsenic and phosphorus." [Atomic Suicide, page 262]

"You thus have uranium in your blood cells and tissues, strontium and **calcium** in your bone marrow, and other radioactively liberated particles affecting every part of your body, its genes, hormones and even unto the destruction of the proteins of your hair and nails, all confined within one particle." [Atomic Suicide, page 263]

Schauberger

It is known, for example, that for the liquefaction of brown coal (lignite) appropriate catalysts are required. Here there is no uniformity, because everything is bipolar and therefore it is necessary to make a clear distinction between positive and negative catalysts. The chemical reaction itself is of no interest biologically speaking, and the whole thing must be considered from a higher standpoint, otherwise it would be impossible, for example, to liquefy hard coal (anthracite), i.e. to transfer it to the next higher state of evolution. This also applies to **calcium** (combusted marble) and other insoluble basic substances. That a falling temperature gradient is of decisive importance for biological processes of development, has already been emphasised elsewhere. Since science, which thinks too mechanistically, has also failed to grasp this, it would be unable to understand the naturalistic interpretation of the concept of 'reaction', which here is to be understood as a process of *ur-genesis*. Without this there would be no reproduction or further development, which is responsible for higher-grade emulsions, namely the inner fusion (marriage) of etherialised primary substances in the 4th spacial dimension.
