In other words, either it is believed in such circles that [progress](#) as an [individual](#) ceases with the **cessation** of [vital physical functions](#), or there is a definite interest in ensuring that, by inhibiting the [production](#) of [qualigen](#) by deliberately eliminating [A-group temperatures](#) (T1 - [Schauberger](#)), the [dull-brained](#) can never die out. higher or lower [temperatures](#) are produced. As the [motion](#) slows, the [temperature](#) drops until ultimately, with the **cessation** of all [molecular motion](#), [absolute zero](#) is reached at -273.15°C (-459.67°F).
