## Keely

"It is through the action of nature's sympathetic forces that planets are born and their volume of matter augmented. If the sympathetic negative polar stream were cut off from the earth, its molecular mass would become independent, and would float away into space as would a soap bubble filled with warm air. The same conditions of governing rule exist in the planetary masses as between the mental and physical forces in our organisms; the organism representing the earth, and its link with the cerebral centers the connection with the infinite mind. In other words, the latent energy existing in the neutral depths of matter, visible or invisible, remains eternally subservient and unchangeably linked to the eternal mind. True science is bastardized by intimating that the life in matter can be destroyed by any intensity of thermal negation (frigidity). Can finite man make use of an infinite element to neutralize infinity? Thermal negation causes molecular oscillation to diminish, or even seem to cease, but the results brought about from this superficial appearance of matter coming to rest are that the latent energy existing in the molecular zone is transferred to the intermolecular, increasing the oscillations of the intermolecular in the same ratio that the molecular is diminished. All the art that man can employ to induce the same effect on the intermolecular zone ends here. Granting, however, that it were possible, what would ensue?" [Newton of the Mind]

"All vibrations that are negative in their character as toward destroying the harmonic relations that exist between the magnetic current and its coincident polar, to carry out the simile, close up the aperture whereby illumination (or transfer) is continuously conducted.

The thirds, on the subdivision of the one hundred and twenty-eight thousand four hundred vibrations, represent the negative antagonism, whereby this peculiar condition is brought about, viz., forty-two thousand eight hundred on the positive; the same on the negative and on the neutral, as associated with the sympathetic negative transmitter.

The keeper is first placed on the magnet, which has an attachment whereby a transmitter can be centrally associated with it; the other terminal having three connections that can be attached to this medium. The impulse is given simultaneously to the three leads after setting the instrument to represent forty-two thousand eight hundred vibrations on the harmonic, the same on the enharmonic and on the diatonic.

If this impulse is given properly, the neutralization will take place within fifteen seconds." [The Operation of the Vibratory Circuit]

## Schauberger

Space and volume are inversely disposed opposites, which consume or animate one another depending on whether one is made to burn by the other or

[4] See description of air-turbine in Austrian Patent No. 145141, p. 115 of this book. —Ed.

6

is itself ennobled intrinsically through this reciprocal intensification and polarization. Today's technology mistakenly chose the former of the two processes and it is therefore no wonder that cancer is on the rampage here, there and everywhere.

Goethe said, "The driving wheels of Nature are polarity and intensification and whoever understands enough to untie also knows enough to bind." What is born in light, disintegrates in the coolness of the ground. It rises up and returns again as a ray of energy in order to quicken that which stands ready to become new life at the boundary between space and volume.

Every leaf is an animalistic magnet in monoplanar form, which attracts and radiates, depending on whether the Sun shines on it or cold caresses it. This great law of reciprocity also operates in water, which constantly restructures itself by altering its space and volume. The space is shaped by light and heat. The volume is a

product of [darkness](#) and [coolness](#). If we understand how to apportion the [opposing relation](#) between [space](#) and [volume](#) and how to organise its intrinsic [structure](#), then the [substance](#) - [water](#) - will become 'The Space' and the formless [volume](#) its realisation, which is transformed instantaneously with [heat-pressure](#), thereby creating the [motion](#) that fills the over-lying [inter-space](#).

If [nature-alienated humanity](#), however, reverses this purposeful process and [combusts](#) precisely those [substances](#) that occasion [life](#), then they should no longer be surprised when the [Sun](#) burns up that which serves it as an [intermediate space](#), and which serves humankind for the maintenance of [life](#).

[Life](#) unfolds itself in [three spheres](#):

1. in the [Carbone\[5\]](#) - sphere
2. in the [Atmosphere](#)
3. in the [Stratosphere](#)

The **connection** between these spheres is created by [water](#). Conversely, the various [states of aggregation](#) of [water](#) form the [bridges](#) for the [formation](#) and [reconstitution](#) of the basic elements carried by [water](#), which succeed in reaching the [Earth's](#) interior from the [stratosphere](#) and vice versa. The purely mechanical [circulation](#) of the physical form - [water](#) - operates in the opposite direction to the [circulation](#) of [energy](#). The [rising](#) of the [C-substances](#) with their carrier - [water](#) - is countered by the sinking of the [oxygen](#). Where these

[5] [Carbone](#): In contrast to the normal use and definition of '[carbon](#)', Viktor [Schauberger](#) grouped all the known elements and their compounds, with the exception of [oxygen](#) and [hydrogen](#), under the general classification of '[Mother Substances](#)', which he described with the word '[Kohle-stoffe](#)', normally spelt 'Kohlenstoffe' and meaning [carbon](#). Apart from the above definition the hyphen also signifies a higher aspect of [carbon](#), both physically and energetically or immaterially. The additional V in the English word is therefore intended to redefine and enlarge the scope of the usual term '[carbon](#)' in accordance with Viktor's concepts. On occasion [carbone](#) will be represented by the term C' [to] differentiate it from the normal term for [carbon](#) — C - Ed.

7

mutually [contra-directional currents](#) intersect, [energy](#) is freed. These [energetic interactions](#) can never reach a [state](#) of [rest](#) due to the constant variation in the length of [night](#) and [day](#). Inevitably therefore, there is a continual shift in the individual microclimatic conditions, which further result in variations in the [quantity](#) and [quality](#) of the basic elements.
