

# core-water

## Schauberger

The [energy](#) that can be gained through [bio-dynamic motion](#) manifests itself in an [increase](#) in [tractive force](#) and [carrying capacity](#), which appear primarily in the [pipe-axis](#). Here the [water](#) is [densified inhomogenously](#), because its contained [gases](#) are [transformed](#) into [non-spacial dynagens](#).<sup>[9]</sup> As a [result](#) the **core-water** [surges](#) ahead like a [ball of energy](#) with [increasing velocity](#). [[The Energy Evolution - Harnessing Free Energy from Nature](#), [The Transport of Ore in Double-Spiral-Flow Pipes](#)]
