

destination

Schauberger

This [naturalesque form](#) of [motion](#) will now be once more reinstated in those places where there are inaccessible [stands](#) of precious [timber](#), which are apparently [untransportable](#) with [oxen](#), [horse-teams](#), [tractors](#), [cable](#) or forest [railways](#), etc. and, as occurred at Neuberg in Steyrling, will be [floated](#) to its **destination** as circumstances demand with about a 90% saving in [transport](#) costs compared to the best [transport](#) systems presently available. Therefore at a time when, according to [radio](#) and [press](#) reports about 800 million people, i.e. about 1/3rd of the world's present [population](#), are threatened with [starvation](#), those people can be saved, whose only [assets](#) are those valuable [timbers](#) spared by modern [forestry](#), because they were deemed [irrecoverable](#), and who for this reason will be repaid in [gold](#) by [nations](#) with a high [exchange rate](#), or in what is of far greater value today - [food](#). For today whatever still stands in accessible [forests](#) - as every [timber](#) expert knows - is worth nothing, or precious little. Such products of [forestry](#) science are in any case unsuitable for [export](#). [[The Energy Evolution - Harnessing Free Energy from Nature, The Life-Current in Air and Water](#)]
