

electricity from space

Herbert Dorsey

ECE theory demonstrates that there are additional terms to be added to standard Maxwell Heaviside equations of conventional EM theory. These terms are the scalar and vector spin connection, ∇_0 and ∇ .

These terms can be considered as the time component of an axis of rotation and the space components of rotation respectively.

So, now the updated equation $E = -(\nabla + \nabla)\phi$ replaces the standard $E = -\nabla\phi$ where ϕ is the electric potential.

This added spin connection, ∇ allows **electricity to be directly drawn from space** as explained at the above mentioned websites.
