Schauberger

All [birth](#) requires [fertilisation](#). [Fertilisation](#), however, necessitates the [disintegration](#) of the original [ur-form](#). All of which brings us to the fundamental question: What actually is [motion](#)? This question is answered by a [free-falling droplet](#) of [water](#), from which a [horizontally](#) and [vertically radiating energy-form](#) springs forth, the [power](#) of the [horizontal emission](#) corresponding to about 12,000 [seed-volts](#) as [measured](#) with an [electrometer](#). These are referred to as [seed-volts](#) here, because in this case we are concerned with a [charge-bundle](#) which contains about 12,000 [water embryos](#) in an [energetic state](#). These are [freed](#) when a [drop](#) of [water](#) merely [falls](#) about 20 cm (8 inches). Naturally, special **equipment** is required to [measure](#) this [capacity](#). To describe it in more detail here, would stray too far from the present theme, therefore [clarification](#) of the '[essentials](#)' will have to suffice. [[The Energy Evolution - Harnessing Free Energy from Nature, The Ennoblement of Water](#)]
