

# flux of virtual photons

"Empty "[spacetime](#)" is filled with an incredibly intense [flux](#) of virtual particles. It is a [plenum](#), not an emptiness. We shall be interested only in the fantastic **flux of virtual photons**, for we are discussing [electromagnetics](#)." [Bearden, [The Final Secret of Free Energy](#)] see [virtual photon flux](#)

---

"When two electrons pass very close to each other a [fluctuation](#) is caused, the [fluctuation](#) behaves as if it is in the presence of a real [photon](#) but the [photon](#) is absent in the scene all that occurs is the fluctuation. This [fluctuation](#) is called a **virtual photon**." [Fharooq Shaik I, Facebook]

"virtual particle is a transient [fluctuation](#) that exhibits some of the characteristics of an ordinary particle, but whose existence is limited by the uncertainty principle." [Tapan Ray, Facebook]
