

# free energy density

"During the [relaxation time](#), we extract from the source only a flow of [virtual photon flux](#) (VPF), which is continually replaced in the source by the vacuum's violent [virtual photon flux](#) (VPF) exchange with the source's [bipolarity charges](#). We do not extract power from the battery/source during [relaxation time](#), but we extract **free energy density**. That **free energy density**, coupling with a finite quantity of electrons, gives us a collected finite amount of energy." [[Bearden, The Final Secret of Free Energy](#)]
