

life giving impulse

Schauberger

Whether [animating](#) or [de-animating life-forces](#) come into being is dependent on the way these substances intermix. The **life-giving impulse** can only be stimulated, if [etherealised carbone](#) ([helium-like](#)) [ethericities](#) bind the [waste products of solar energy](#) that materialise in the form of gas, i.e. so-called [oxygen](#). On the other hand, [decomposive, life-removing forces](#) will be stimulated if the process of interaction proceeds in the reverse order. That is to say, if the [oxygen ethericities](#) bind the [maternal ethericities of carbone](#). When [heated](#), [oxygen](#) becomes [aggressive](#), whereas with [cold](#) it becomes [passive](#).
