

molecular focalization and redistribution

Keely

"When the *proper impulse* is given to induce the *rotation* with pure alternating *corpuseular action*, the *condition of action become perpetual* in their *character*, lasting long enough from that one *impulse* to wear out any machine denoting such *action*, and on the *sympathetic stream* eternally perpetual. The *action* of the *neutral* or *focalizing centers* represents **molecular focalization and redistribution**, not having any *magnetism* associated with them, but when the *radiating arms of their centers* are submitted to the *triple compound vibratory force*, representing their *mass thirds*, they become magnetic and consequently cease their *rotation*. Their *rotation* is induced by submitting them to three different *orders* of *vibration*, simultaneously giving the majority to the *harmonic third*." (Keely) [Snell Manuscript - The Book, DISTURBANCE OF MAGNETIC NEEDLE, page 8]
