

motion-generating form

Schauberger

which in turn the [allotropic](#)[1] [primary materials](#) for [growth](#) and [development](#) also reside. Reacting to [bio-centrifugence](#), these [basic substances](#) are [liberated](#) through the [cycloid-space-curve-motion](#) of the [Earth](#) and under the [influence](#) of [reactive cooling substances](#), [consume](#) (bind) the [counter-weighting oxygen](#). [Reactive differences](#) in [potential](#) are created in this way which express themselves as [reactive differences](#) in [temperature](#), which on their part, as all-penetrating [inner outward<->inward](#), [upward<->downward](#) dynamic influences, [intensify](#) the [physical](#) (external) [form of movement](#). This leads to a renewed [intensification](#) of the [inner dynamic processes](#), which once again act to [stimulate](#) additional [motion](#). Thus it is absolutely no wonder that the good old [Earth](#) eternally [rotates](#) about her [peculiarly unique axis](#), because in this special [axis](#) (viz. the [shimmering shaft](#) in a [water vortex](#)) that something [ascends](#), which enables [stationary trout](#) to stand [motionless](#) amidst torrential [flows](#) and to flee [upstream](#) like [lightning](#). A [phenomenon](#) inexplicable in terms of [mechanics](#), because the [trout](#) must not only overcome its own [weight](#), but also that of the [counter-flowing dense](#) and [heavy spring water](#). Indeed it can escape [upstream](#) all the more rapidly, the faster the [cold](#) specifically [heavier water-masses](#), which [whirl](#) about their own [axes](#) in exactly the same way that the [Earth rotates](#) about hers, enter its [jaws](#) and [flow](#) out of its [gills](#) through a [system of cycloid-space-curves](#). In this way the particular [axis](#) is formed in which that something returns to its [ur-source](#), which becomes [free](#) through this special [rotating motion](#) and the [frictional motion](#) produced by it. In becoming [free](#) in this way, it then draws the **motion-generating form** - in this case the [trout](#) - in its [wake](#), because this [counter-flowing energy-form](#) is the [force](#) that enables everything that crawls and flies on this [manure-heap Earth](#) to overcome its own [weight](#). In other words, it is the '[levitational force](#)', without which there would be no [life](#), no [movement](#), no [growth](#) and naturally no [gravitation](#) either.
