

# moving pairs

"Step No. 2. The cylindrical [coil](#) made for the creation of an [electric field](#) does not, in any respect, conform with the [electric current](#), which divides the [stillness of cathodes](#) into **moving pairs**, for the purpose of [multiplying the motion](#) of those moving pairs to create the [heat](#) and [compression](#) necessary to simulate the [IDEA](#), which concentrated [electric Mind-thinking](#) desires to give objective expression to." [[Atomic Suicide](#), page 273]
