

positive condition

"Electricity is the result of three [differentiated sympathetic flows](#), combining the [celestial](#) and [terrestrial flows](#) by an [order](#) of [assimilation negatively attractive](#) in its character. It is one of Nature's efforts to restore [attractive differentiation](#). In analyzing this [triple union](#) in its vibratory [philosophy](#), I find the highest [order](#) of perfection in this [assimilative action](#) of Nature. The whole condition is [atomic](#), and is the introductory one which has an [affinity](#) for [terrestrial centers](#), uniting magnetically with the [polar stream](#); in other words, uniting with the [polar stream](#) by [neutral affinity](#). The [magnetic](#) or [electric forces](#) of the [earth](#) are thus kept in stable [equilibrium](#) by this [triune force](#), and the chords of this force may be expressed as 1st, the [dominant](#), 2nd, the [harmonic](#), and 3rd, the [enharmonic](#). The value of each is, one to the other, in the rates of figures, true [thirds](#). E flat- [transmissive chord](#) or [dominant](#); A flat- [harmonic](#); A double flat- [enharmonic](#). The union of the two [prime thirds](#) is so rapid, when the [negative](#) and the **positive conditions** reach a certain range of vibratory [motion](#), as to be compared to an [explosion](#). During this action the [positive electric stream](#) is liberated and immediately seeks its [neutral terrestrial center](#), or [center of highest attraction](#)."
