

provenance

Schauberger

[3] **Oxygenes**: In similar fashion to the previous explanation and interpretation of 'carbones', this relates to all normal forms of oxygen as well as to its more metaphysical **provenances**. — Ed [The Energy Evolution - Harnessing Free Energy from Nature, Bio-Technology: Active and Reactive Temperatures]

[6] **Seminal** or **fertilising substances**: This relates to oxygen in all its forms. In Viktor Schauburger's view oxygen is not of the Earth, but comes from above. As a lower **provenance** sunlight, it is male fertilising substance, whereas the mother substances, so called 'carbones' originate from within the Earth. — Ed. [The Energy Evolution - Harnessing Free Energy from Nature, The Economy Founded on Reactively Produced Energy]

In order to throw more light on their origins, there are two types of seeds:

1. Those responsible for all physical forms of growth, which according to their degree of maturity fall down and upon returning into the earth, germinate and produce the increased and qualitatively ennobled forms of growth. These are the **provenances** of sweet-matter (carbones), or the
2. **Seminal fruits**, which having fulfilled their reproductive function, become dormant, die off and become the seminal substances, as it were, for the creation of quality-matter, which after decomposition are then transmuted through 'cycloid-space-curve-motion'. [The Energy Evolution - Harnessing Free Energy from Nature, The Economy Founded on Reactively Produced Energy]
