

# quantity

## quantity

noun: the amount of something

noun: a particular amount of something

noun: a large amount of something

noun: an adequate or large amount ("He had a **quantity** of ammunition")

noun: something that has a **magnitude** and can be represented in mathematical expressions by a constant or a variable

noun: how much there is of something that you can **quantify**

---

## Schauberger

Space and volume are **inversely disposed opposites**, which **consume** or **animate** one another depending on whether one is made to **burn** by the other or

[4] See description of **air-turbine** in Austrian Patent No. 145141, p. 115 of this book. —Ed.

6

is itself **ennobled** intrinsically through this **reciprocal intensification** and **polarization**. Today's technology mistakenly chose the former of the two processes and it is therefore no wonder that **cancer** is on the rampage here, there and everywhere.

**Goethe** said, "The driving wheels of **Nature** are **polarity** and **intensification** and whoever understands enough to untie also knows enough to bind." What is born in **light**, **disintegrates** in the **coolness** of the **ground**. It rises up and returns again as a **ray** of **energy** in order to **quicken** that which stands ready to become new **life** at the boundary between **space** and **volume**.

Every leaf is an **animalistic magnet** in **monoplanar form**, which **attracts** and **radiates**, depending on whether the **Sun** shines on it or **cold** caresses it. This great **law of reciprocity** also operates in **water**, which constantly **restructures** itself by altering its **space** and **volume**. The **space** is shaped by **light** and **heat**. The **volume** is a product of **darkness** and **coolness**. If we understand how to apportion the **opposing relation** between **space** and **volume** and how to organise its intrinsic **structure**, then the **substance** - **water** - will become 'The Space' and the formless **volume** its realisation, which is transformed instantaneously with **heat-pressure**, thereby creating the **motion** that fills the over-lying **inter-space**.

If **nature-alienated humanity**, however, reverses this purposeful process and **combusts** precisely those **substances** that occasion **life**, then they should no longer be surprised when the **Sun** burns up that which serves it as an **intermediate space**, and which serves humankind for the maintenance of **life**.

**Life** unfolds itself in **three spheres**:

1. in the **Carbone[5]** - sphere
2. in the **Atmosphere**
3. in the **Stratosphere**

The **connection** between these spheres is created by **water**. Conversely, the various **states of aggregation** of **water** form the **bridges** for the **formation** and **reconstitution** of the basic elements carried by **water**, which succeed in reaching the **Earth's** interior from the **stratosphere** and vice versa. The purely mechanical **circulation** of the physical form - **water** - operates in the opposite direction to the **circulation** of **energy**. The **rising** of the **C-substances** with their carrier - **water** - is countered by the sinking of the **oxygen**. Where these

[5] **Carbone**: In contrast to the normal use and definition of 'carbon', Viktor **Schauberger** grouped all the known elements and their compounds, with the exception of **oxygen** and **hydrogen**, under the general classification of 'Mother Substances', which he described with the word 'Kohle-stoffe', normally spelt 'Kohlenstoffe' and meaning **carbon**. Apart from the above definition the hyphen also signifies a higher aspect of **carbon**, both physically and

energetically or immaterially. The additional V in the English word is therefore intended to redefine and enlarge the scope of the usual term 'carbon' in accordance with Viktor's concepts. On occasion [carbone](#) will be represented by the term C' [to] differentiate it from the normal term for [carbon](#) — C - Ed.

7

mutually [contra-directional currents](#) intersect, [energy](#) is freed. These [energetic interactions](#) can never reach a [state of rest](#) due to the constant variation in the length of [night](#) and [day](#). Inevitably therefore, there is a continual shift in the individual microclimatic conditions, which further result in variations in the **quantity** and **quality** of the basic elements. [[The Energy Evolution - Harnessing Free Energy from Nature, Conclusions](#)]

In the aforementioned patent applications it was stated in no uncertain terms, where the causes of these [regressive symptoms](#), including [cancer](#), were to be sought, which imperil all growth and highly evolved forms of [life](#). In these applications I made the observation that it was the method of moving [water techno-academically](#) which in every respect is destructive and which is solely responsible for the economic decline, the rise in social privation and the constant increase in political unrest. [Techno-academic motion](#) is so called, because it is taught in all academies and universities in the form of the [centrifugence](#) of medial structures ([earth](#), [water](#) and [air](#)) and in every dictionary it is described as an 'unnatural' (unreal) form of [acceleration](#). In spite of this it is used today in all areas of industry in its exceptionally [centrifugating](#) form, because no other method of [acceleration](#) is known. It will therefore continue to be used everywhere until a more rational source of power is discovered.

Observations over many years of the almost motionless stationary [trout](#) in rushing mountain streams led to the discovery of the best and cheapest source of [mechanical power](#). It is a form of [energy](#) that promotes healthy growth and will free [humanity](#) from the technology that presently enslaves it. Founded on a [biological vacuum](#), it will provide the basis for a **quantitative** and **qualitative** increase in productivity, thereby solving the pressing problem of more and more people and less and less food. The political turmoil now apparent everywhere can easily lead to the third and last World War, which if [atom bombs](#) are used, will mean the end of civilisation. This should certainly be reason enough to consider the following seriously even though it may appear utopian at first sight, an aspect that should offer no further impediment once the academic expertise derived from the misinterpretation of fundamentals collapses like a house of cards. Nor should it be rejected because many occupations that are more or less parasitic will be eliminated in the process. We are here concerned with the existence or non-existence of millions of people in all countries of the world.

For more than a century it has been known that [water](#) emits [ionising radiation](#), if it is discharged through a system of [straight jets](#) under pressure (see figs. 1-36). Hitherto unknown, however, was the following: If these [rays](#) are braked by a [filter](#) composed of [fatty substances](#) ([paraffin wax](#)) and conducted in bundled form into a [vacuum-tube](#), then they [incandesce](#) on the inner surfaces, producing a dark [red](#), strongly [pulsating glow](#) when the tube is earthed. This effect is similar to [sheet-lightning](#). If these [rays](#) are amplified in [Leyden jars](#) and then conducted into inflammable liquids or gases, they ignite the latter. This is how the [fire](#) started in the [Hindenburg](#), which was filled with [hydrogen](#) and became [earthed](#) when its [ballast-water](#) was released. The [[The Energy Evolution - Harnessing Free Energy from Nature, The Biological Vacuum - The Optimal Driving Force for Machines](#)]

This means, no more and no less, that [retrogressive development](#) will occur everywhere the influence of science is active. Therefore, for lack of the supply of [qualigen](#), [mental abilities](#) will constantly [deteriorate](#) in step with the [progressive](#) rise in the **quantity** of living [flesh](#). People will become [imbecilic](#), [vegetative](#) and the lower [orders of life](#) will [atrophy](#) and little by little will cease to exist, because the relatively highest [energy-concentrate](#), the 'upwardly radiating', is missing, which manifests and declares itself as 'Life'. [[The Energy Evolution - Harnessing Free Energy from Nature, Bio-Technology: Active and Reactive Temperatures](#)]

Apart from this, it is an indisputable and demonstrable fact that [B-group temperatures](#) are about 96% more expensive to produce than the [reactive A-group temperatures](#) responsible for [formation](#) and [uplift](#), for which natural [development-facilitating devices](#) and associated [systems of motion](#) are required. The necessity to work will therefore become progressively less, and [food](#) and other necessities will increase **quantitatively** and **qualitatively** as [formative](#) and [levitative power](#) strengthens. [[The Energy Evolution - Harnessing Free Energy](#)

from Nature, Bio-Technology: Active and Reactive Temperatures]

The raw materials out of which this fine matter arises under very specific preconditions, consist of the naturalesquely interred earthly remnants of former life. On no account are they senselessly and purposelessly reduced to dust and ashes, but once again, under particular preconditions, they develop into the 'peculiar' axis in the form of the formative and levitative current mentioned earlier. This spiritualising and uplifting current, which inwinds, upwardly impels and whirls around like a tornado, is partially condensed by the above heat-forms and can be readily measured and generated in any quantity and quality almost without cost. By means of this formative and levitative current all growth can be increased and qualitatively improved almost at will, and any weight can be lifted or moved indirectly at any desired speed rotationally and / or vertically with a power that increases by the square. [The Energy Evolution - Harnessing Free Energy from Nature, The Life-Current in Air and Water]

'Conventional' science and fire-spitting technology naturally do this very differently, indeed in a diametrically opposed fashion. They exploit hot processes of oxidation as the developmental basis for the build-up of a decomposive and retrogressive force, which in Nature is employed for the recall for reconstitution of what is unfit for development. No wonder therefore that this type of force reacts, with resistances that increase by the square, against the insanity of its wrongful exploitation for the purposes of the build-up of culture. Therefore the crowning law of today's technology, the conservation of energy law and the so-called heat equivalent are founded on an unnatural developmental basis. To put it plainly, contemporary science and its technology have backed the wrong horse and have ridden it for so long, or have sacrificed the available raw materials to power precisely the opposite force to such an extent as to drag in an economic collapse by its head and shoulders. It has not understood how to copy the ideal method of generating power and formative energy, or through the naturalesque transformation of inferior raw materials into quality products, how to make the natural sources of energy available in unlimited quantity for a virtually free, silent and development furthering mechanical power. [The Energy Evolution - Harnessing Free Energy from Nature, New Forms of Motion and Energy]

function unimpededly, we still have to creep and crawl around on this floor in a way that houseflies cannot emulate, which are perhaps the only beneficiaries of these incongruous conventional methods of heating. These methods will also almost completely exhaust the reserves of coal, which is no longer available in sufficient quantity, or is impossible to deliver to the point of use with the present means of transport (the true energy-gluttons), even if sufficient quantities were available for this coming catastrophic winter [1945-46]. It is therefore understandable that those who are threatened with freezing to death and starvation will fall upon this new method of heating and transport like beasts of prey, unless the matter is put in hand with extreme caution. This is the principal reason why heating with mineral substances, with which reactive temperature-forms can be produced virtually without cost, must be inaugurated with great care. These reactive temperatures are activated merely when various allotropic substances are gently stimulated by active heat influences. [The Energy Evolution - Harnessing Free Energy from Nature, The Economy Founded on Reactively Produced Energy]

Explosion is chemical reaction that takes place extremely rapidly, in which a large increase in pressure occurs due to large quantities of hot gases. Explosions are always innately destructive. They therefore function in a life-harming way. [The Energy Evolution - Harnessing Free Energy from Nature, Explosion and Implosion - Expansion and Impansion]

The more strongly the attracting forces become active in the developmental process, the greater the quantity of ennobled magnetolytes (ascended and magnetically supercharged ions) that soar upwards with their adherents and the greater the quantity of less valuable substances expelled by the highest-grade elements which have to solidify under the effect of the counter-influences described earlier. And thus through the proper regulation of these magnetolytic dissociative processes, the increase and qualitative improvement of the aforesaid product of solidification, or growth, can be enhanced at will. [The Energy Evolution - Harnessing Free Energy from Nature, Magnetism is the Function of Levitism and Electricism is the Function of Gravitism]

The plus and minus elements dissociated from the water separate from one another. The small quantities of carbone present in poor quality water make their escape immediately, because they dematerialise themselves. The phos-elements[3] incorporated by the Sun disperse, enter the horizontal potential field, become highly

aggressive, spread themselves over the active substances and await things now imminent. The 'imminent' is a geospheric gas, which is ingested with great cold. [The Energy Evolution - Harnessing Free Energy from Nature, Letter to Werner Zimmermann]

We are therefore not only faced with the birth of water, but also with the determination of the gender of the birth product. From the sum total of these experiments arose a discovery, whose implications first become evident, when we consider that it opens the way to produce water - the blood of the Earth - in any desired quantity and quality naturalesquely and in addition to pass on the desired properties to the evolutionally-older new-born entity. Water pipelines are therefore no longer necessary in order make what is nothing less than the most noble water available in the middle of treeless deserts or salt-water wastes. This not only ingeniously solves the problem of living space for a constantly increasing population, but also that of food shortages. [The Energy Evolution - Harnessing Free Energy from Nature, The Ennoblement of Water]

After this practical demonstration, it was announced that the quantity of ore available for transport was falling by the month and that it would no longer be profitable to build a second such pipe-line alongside the existing railway, because it might be necessary to shut down the blast-furnaces altogether and to close the business temporarily. [The Energy Evolution - Harnessing Free Energy from Nature, The Transport of Ore in Double-Spiral-Flow Pipes]

That this tremendous pressure expresses itself silently requires no special comment. That, as a high-grade air, this product of transformation has a more beneficial effect on the environment and development generally than the waste matter of explosive processes, also goes without saying. That this high-grade product of transformed air does not smell, is without doubt. In this way what was striven for has been achieved, namely a far higher exploitable pressure than is produced by any form of petrol (gasoline). Moreover, it is an incombustible pressure-creating substance that neither stinks nor creates a din, and its beneficial effect can be raised to any desired level, so that in practice the smallest quantities are enough to achieve any desired effects. [The Energy Evolution - Harnessing Free Energy from Nature, The Liquefaction of Coal by Means of Cold Flows]

### James Clerk Maxwell

"9 coefficients determine the relationship between flux and intensity  
6 of these coefficients form 3 pairs of equal quantities  
3 pairs of equal coefficients will self-conjugate." [James Clerk Maxwell]

The original quote from "[https://svpwiki.com/pdf/A\\_Treatise\\_on\\_Electricity\\_and\\_Magnetism.pdf](https://svpwiki.com/pdf/A_Treatise_on_Electricity_and_Magnetism.pdf) - vol. I".

"The case in which the components of the flux are linear functions of those of the force is discussed in the chapter on the Equations of Conduction, Art. 296. There are in general nine coefficients which determine the relation between the force and the flux. In certain cases we have reason to believe that six of these coefficients form three pairs of equal quantities. In such cases the relation between the line of direction of the force and the normal plane of the flux is of the same kind as that between a diameter of an ellipsoid and its conjugate diametral plane. In Quaternion language, the one vector is said to be a linear and vector function of the other, and when there are three pairs of equal coefficients the function is said to be self-conjugate." [James Maxwell, A Treatise on Electricity and Magnetism - vol. I]
