

# self-evolve

## Schauberger

Therefore if the [media](#) of [water](#) or [air](#) are moved [naturalessquely](#) (and the [trick](#) is how to do this) then the [bipolar gases](#) are initially [transformed](#) into [aetheric](#) and ultimately into [energetic stocks](#) of [subtle matter](#). These are then [bound](#) in the **self-evolving** [juvenile media](#) ([air](#) and [water](#)) and what has been increased in this way is rendered [homogenous](#) and specifically [densified](#). That is to say, they [intensify](#) the [carrying capacity](#) and [tractive force](#) to such a [degree](#) that in such [waters material](#) with a higher [specific weight](#) than the [transporting medium](#), even [ore](#) with a [specific weight](#) of 1.9, readily [floats](#) down the [centre](#) of the [axis](#), where the strongest [suctional force](#) acts [downstream](#) and the strongest [reactive force](#) acts [upstream](#) in the [form](#) of a [dynagen gradient](#), but which, however, has no [effect](#) on [raw material structures](#) to the extent that these do not involve [life-forms](#).
