

soap bubble

Keely

"It is through the action of nature's sympathetic forces that planets are born and their volume of matter augmented. If the sympathetic negative polar stream were cut off from the earth, its molecular mass would become independent, and would float away into space as would a **soap bubble** filled with warm air. The same conditions of governing rule exist in the planetary masses as between the mental and physical forces in our organisms; the organism representing the earth, and its link with the cerebral centers the connection with the infinite mind. In other words, the latent energy existing in the neutral depths of matter, visible or invisible, remains eternally subservient and unchangeably linked to the eternal mind. True science is bastardized by intimating that the life in matter can be destroyed by any intensity of thermal negation (frigidity). Can finite man make use of an infinite element to neutralize infinity? Thermal negation causes molecular oscillation to diminish, or even seem to cease, but the results brought about from this superficial appearance of matter coming to rest are that the latent energy existing in the molecular zone is transferred to the intermolecular, increasing the oscillations of the intermolecular in the same ratio that the molecular is diminished. All the art that man can employ to induce the same effect on the intermolecular zone ends here. Granting, however, that it were possible, what would ensue?" [Newton of the Mind]
