

surplus energy

Schauberger

The product of this [involuting motion](#), which always [converges](#) to a [point](#) while at the same time [curling](#) in upon itself, is [biomagnetism](#). That it is also contingent on the presence of [catalytic influences](#) will not be further discussed here. As such, [biomagnetism](#) extends itself [longitudinally](#) and [radiates](#) its **surplus energies** [vertically](#) and, for example, draws the [trout](#) along in its [wake](#). The [trout](#) can so regulate this [upsuctional force](#) with its [gills](#) that even its [motionless stance](#) and equally well-known mastery of [gravity](#) becomes understandable in the light of the above. The [weight](#) of physical [masses](#) only exists in the [atmospheric living space](#). Above this the [force of levitation](#) prevails as [inverted gravitation](#). Consequently, all [pressure-](#) and [heat-intensifying motion](#) must inevitably function all the more irrationally, uneconomically and [development-impedingly](#), the more it is [accelerated](#) and [strengthened](#). To this end raw materials are squandered to such a degree that a growing dearth of them is unavoidable.
