## Keely

"The **sympathetic outflow** from the [celestial streams](#) reaches the infinite depths of all the diversified forms of [matter](#). Thus it is seen that the [celestial](#) flow which permeates, to its [atomic](#) depths, the [terrestrial](#) convolutions of all [matter](#), forms the exact [sympathetic](#) parallel to the human [brain-flow](#) and the physical organism, a perfect [connective link](#) of controlling [sympathy](#) or [sympathetic](#) control. Under certain [orders](#) of [sympathetic vibration](#), [polar](#) and [antipolar](#), the attractive sympathies of either stream can be intensified, so as to give the predominance to the [celestial](#) or to the [terrestrial](#).
