

three sympathetic streams

"The earth's rotation excites and disturbs the [equilibrium](#) of the **three sympathetic streams**, of which the material manifestations are the [three forms of electricity](#). The alternate light and darkness assists in preserving their activity through [disturbance of equilibrium](#), with consequent "[dissimilation](#)" ([radiation](#)) and "[assimilation](#)" ([absorption](#)). The dark zone, following the light zone, holds the fluctuations of the polar power constant. This is the [tortoise](#) mentioned in the fable, upon which the world rests." [[FORCES CONTROLLING THE EARTH](#)]
