

# tornado

## Russell

"The result may better be pictured by the **tornado** which every action in Nature emulates. All electrical motion in the [octave wave](#) turns spirally around centering, [still Magnetic shafts](#), just as [cyclones](#) do. All [electrical compression](#) begins by violent [expansion](#) to create a condition which borrows its opposite, as all opposites in Nature do. This effect is the answer to the electrical engineer's question which asks WHY his [electric current](#) is only at the surface of his wires and cables, and not all through them except at the points where [loops of force](#) count his [impulse frequencies](#) for him. If it were possible for him to slice an [electrical current](#) into sections he would find that each section would be a ring whirling around a [still center](#), except at points where collisions occur between the [two lights of the spectrum](#), which are so forcibly projected from [cathode zeros](#)." [Atomic Suicide, page 122-125]

## Schauberger

The [raw materials](#) out of which this [fine matter](#) arises under very specific [preconditions](#), consist of the [naturally interred earthly remnants](#) of [former life](#). On no account are they senselessly and purposelessly reduced to [dust](#) and [ashes](#), but once again, under particular [preconditions](#), they [develop](#) into the 'peculiar' [axis](#) in the [form](#) of the [formative](#) and [levitative current](#) mentioned earlier. This [spiritualising](#) and [uplifting current](#), which [inwinds](#), [upwardly impels](#) and [whirls](#) around like a **tornado**, is partially [condensed](#) by the above [heat-forms](#) and can be readily [measured](#) and [generated](#) in any [quantity](#) and [quality](#) almost without cost. By means of this [formative](#) and [levitative current](#) all [growth](#) can be increased and [qualitatively](#) improved almost at [will](#), and any [weight](#) can be lifted or moved indirectly at any desired [speed rotationally](#) and / or [vertically](#) with a [power](#) that increases by the [square](#).
