

transform

Keely

"A *dynamo-electric machine* is placed at any given spot; its object, being put in *action*, is to withdraw from the earth its *neutral electricity*, to *decompose* it into its *two conditions* and to collect, upon *accumulators*, the *electricity* thus separated. As soon as the *accumulators* are *charged*, the *electricity* is disposable; that is, our lamps can be lighted. But what is marvelous in all this is that the *forces of nature* can be **transformed** at will. Should we not wish for *light*, we turn a knob and we have *sound, heat, motion, chemical action, magnetism*. Little seems wanting to create *intelligence*, so entirely do these accumulated forces lend themselves to all the **transformations** which their *engineer* may imagine and desire. But let us consider how greatly superior is our *cerebral mechanism*. In order to light a theatre we require a wide space, a *dynamo-electric machine* of many horse-power, *accumulators* filling many receptacles, a considerable expense in *fuel*, and clever *mechanicians*. In the human *organism* these *engines* are in miniature, one decimeter cube is all the space occupied by our *brain*; no wheels, no pistons, nothing to drive the *apparatus*, we suffice ourselves. In this sense, each of us can say, like the philosopher *Biaz*:- *Omnia mecum porto*. Our *cerebral organ* not only originates *motion, heat, sound, light, chemical actions, magnetism*, but it produces *psychic* forces, such as *will, reasoning, judgment, hatred, love*, and the whole series of *intellectual* faculties. They are all derived from the same *source*, and are always identical to each other, so long as the *cerebral apparatus* remains intact. The *variations of our health* alone are capable of causing a *variation* in the *intensity and quality* of our *productions*. [Keely, *Vibratory Physics - The Connecting Link between Mind and Matter*]

Schauberger

Just a slight *positively surcharged motive* or *stimulative influence* is enough to *discharge* the *blood* of the Earth, the extremely *pressure-sensitive accumulator* of the true *life-forces* in *statu nascendi*, which it accumulates in order to **transform** them into *reactivated formative* (*levitative*) or *disintegrative* (*retrogressive*) *energies*. [The *Energy Evolution - Harnessing Free Energy from Nature, Cadaverine Poison in Ray-Form - Ptomaine Radiation*]

Undoubtedly known to the *high-priests* of ancient cultures, these *concentrates* of *noble matter* (*ethericities*) are responsible for the legendary near-absolute abundance of *food* and the *freedom of movement* associated with it. Incidentally, these *concentrates* were also ultimately responsible for the *disaster* of *Atlantis*, referred to as the *Flood* by a circumspect *Church*, which was the result of the careless control of these elemental *levitative energies*. In this respect the *Church* was quite right, because the *negatively potentiated mother-water* (*amniotic fluid*), the physically *first-born*, will be *precipitated* out by these *formative and levitative energies* (there is exact proof of this). It is in this *ennobled carrier-substance*, however, that the *latent higher-grade atomic energies* reside, which make naturally ordained *locomotion* possible. These *energies*, however, can be **transformed** into the most developmentally harmful forms of *atomic energy* if, for example, a *cyclotron-like centrifugating device* is employed as the supposedly correct means for producing *energy*. Hitherto it has not been known that *vitamins*, the *concentrates* of *noble matter* (perfectly developed *fat-formations fermented* under the exclusion of *light* and *heat*, which are known to solidify at *death*) can be degraded through inferior (*expansively-acting*) influences of *heat* and *light* and are gradually **transformed** into the *atomic ptomaine radiation* mentioned at the beginning. Only recently has so-called *vacuum-distillation* been applied to obtaining high-grade *fat-concentrates* from *essential oils*. For this, however, only *atmospheric-gas-rarefying devices, air-suction* or *air-pressure pumps* are used, which can never emulate the processes that wise *Nature* employs for specifically *densifying* these highest-grade *concentrates* of *ennobled matter*. This is the '*Organic*' vacuum. Created by a *centripetence-machine*, it *densifies noble matter* through the *co-active influences* of higher-grade *motion* and *contractile stimuli*. That is to say, the moved (*accelerated*) mass approaches the *temperatureless* and *feverless anomaly state* (+4°C - +39.2°F), which is only possible through *mass-acceleration* on the *longitudinal axis*. Nor can the *resistance to motion* mentioned earlier evolve during this process for the simple reason that this '*original*' system of *mass motion* and *acceleration*, the *dissociative, structure-loosening, positive temperature* influences are missing, which would otherwise induce an increase in dangerous *wall-pressures*. It should be noted that it is entirely immaterial whether a *molecular interaction* between *basic elements* is initiated by a *physical* or

metaphysical motion-excitation combination. In the same way that social revolutions arise from psychological stimuli, so too can a beneficial fever and thus the healing of a supposedly incurable disease be provoked by a strong inner stimulus, or conversely, sudden death through a so-called stroke, caused by an abrupt alteration of the inner interaction between basic substances. [The Energy Evolution - Harnessing Free Energy from Nature, Cadaverine Poison in Ray-Form - Ptomaine Radiation]

(b) Two different types of flow, which we shall describe as F1 and F2.

Through these hitherto unknown forms of temperature and motion the substance in question (i.e. water or air) is decomposed, **transformed** and built up. In this way, through appropriate regulation, elemental energies are freed. Suctional and pressural forces come into being, which in my apparatuses evolve along a common developmental axis and represent an entirely new means of motion and propulsion. [The Energy Evolution - Harnessing Free Energy from Nature, NEW FORMS OF TEMPERATURE]

In Nature the purpose of temperature-form T1, which is associated with flow-form F1, is to **transform** [1]the condensed (allotropic) inner elements of organisms into aethero-energetic animating and kinetic energies. These T1 temperature-forms gives rise to falling and concentrating heat and exhibits rising and expanding cold effects. T2 triggers reduction processes and fosters apathogens. If T1 predominates, then an increase in raw materials and the qualitative improvement of all products of growth result. [The Energy Evolution - Harnessing Free Energy from Nature, NEW FORMS OF TEMPERATURE]

If specifically heavy high- quality water is atomised and the resultant water vapour is compressed by a descending piston[6.1] with a simultaneous infusion of atmospheric oxygen, then this aqueous mixture of air is instantaneously **transformed** into increased and highly potentiated stocks of new air. The expansive pressure produced in this way corresponds to the power of about 2,000 atmospheres per litre of water. [The Energy Evolution - Harnessing Free Energy from Nature, The Life-Current in Air and Water]

Conventional science has so far only become acquainted with the forms of heat that exhibit fatiguing effects, which however are those heat-forms through which the resistance to motion increases by the square of the velocity. This occurs for the simple reason that they are precisely the forms of temperature that kill off all dynamism and vitality and which, after a suitable development, are **transformed** into the condensing (falling and concentrating) cold-forms in order to conduct the thing in question back onto or into the Earth, where under the exclusion of light and heat it is prepared for a renewed attempt to rise. [The Energy Evolution - Harnessing Free Energy from Nature, The Life-Current in Air and Water]

Therefore if the media of water or air are moved naturalesquely (and the trick is how to do this) then the bipolar gases are initially **transformed** into aetheric and ultimately into energetic stocks of subtle matter. These are then bound in the self-evolving juvenile media (air and water) and what has been increased in this way is rendered homogenous and specifically densified. That is to say, they intensify the carrying capacity and tractive force to such a degree that in such waters material with a higher specific weight than the transporting medium, even ore with a specific weight of 1.9, readily floats down the centre of the axis, where the strongest suctional force acts downstream and the strongest reactive force acts upstream in the form of a dynagen gradient, but which, however, has no effect on raw material structures to the extent that these do not involve life-forms. [The Energy Evolution - Harnessing Free Energy from Nature, The Life-Current in Air and Water]

acid are bio-centrifugated with the aid of cycloid-space-curve-motion and so strongly expanded by mechanical means, that they become free, unipolar, cool and highly active in a kind of ray-form. They consume (bind) the oxygenes which become inactive due to the effect of this reactive temperature influence, when these seminal substances[6], which concentrate around the longitudinal axis are dispersed mechanically. In this way they are made palatable as it were, in a manner similar to branches which, swayed up and down by the wind, prepare or pre-masticate the food for the young saplings growing under the protection of the mother-trees. The ultimate products of this digestive process are the high-grade forms of fructigen which, through a progressive series of transformative and formative processes, are produced in similar fashion, when one entity is consumed by a higher one, which in turn falls victim to an even higher lover. The fructigens thus produced are finally consumed by the Earth herself, who gives upward birth to primary products of synthesis, which are created through a

progressive series of interactions involving the etherealisation of former fatty-matter derived, for example, from naturalesquely broken down and **transformed** worm-fat. This etherealising process then ur-produces the more highly influential substances in an energetic state, which the community of worm descendants once more brings to life and moves 'originally'. [The Energy Evolution - Harnessing Free Energy from Nature, The Economy Founded on Reactively Produced Energy]

Magnetism and electricism are the two opposing metaphysical energy-forms, which regulate life and death and which dwell in every solid, liquid and gaseous (aeriform) mass (matter) in an allotropic and latent transitional state. They await the all-important developmental impulse in order to be **transformed** into higher-grade (life-affirming) or lower-grade (life-negating) forms of energy. In the former case a magnetolytic dissociation process plays the mediatory role and in the latter an electrolytic. The belief that magnetism was a passive and uninteresting by-product of electricism arose merely because nobody was aware of the type of motion that gives rise to higher-grade energy-forms. Nor were they aware of the associated dynamic shapes with which latent bipolar dynagens and their carrier-substance can be accelerated in such a way naturalesquely that, in accordance with the equation $F = ma$, the force responsible for the increase in substance and qualitative improvement (ennoblement) arises with whose aid the relatively highest grade energy-form can come into being. [The Energy Evolution - Harnessing Free Energy from Nature, Magnetism - Electricism]

Up to now this formative, levitative, multiplying and ennobling natural force has not only been inhibited, but through the reversed form of mass-acceleration has been **transformed** into the decomposive energy-form that destroys development-ripe raw-material. All this happened for the sole reason that air and water were moved axially->radially (= technically, hydraulically or even dynamically) instead of radially->axially, because it was generally believed that the earthly residues of former life decayed to dust and ashes! And so it came to pass that these vital formative substances were thoughtlessly decomposed or combusted in order to produce lower-grade light, temperature and power. In so doing people literally condemned themselves to death by the very sweat of their brows. [The Energy Evolution - Harnessing Free Energy from Nature, Magnetism - Electricism]

In reality, for the last 2000 years the opposite has happened. Only the Catholic Church, even if merely symbolically, has indicated the naturalesque way to **transform** matter into spirit. On the other hand, in all areas of the [The Energy Evolution - Harnessing Free Energy from Nature, Magnetism - Electricism]

Accordingly we have to learn the lesson from both extremes and balance out both forms of motion and acceleration in such a way that in accordance with the well-known equation $F = ma$, the desired force F in the form of a predominantly magnetic ion constantly possesses enough levitational superiority to ensure that natural increase and qualitative improvement can keep pace with the unavoidable increase in the population. That is to say, the standard of living must be regulated through the use of higher-grade (quality-increasing) retro-influent dynagens, which come into being when bipolar threshold masses are centripetated in accordance with the equation $E = mc^2$. In other words, when they are accelerated by radially->axially in-winding forces to a speed exceeding that of sound under the simultaneous effect of a falling temperature gradient, i.e. accelerated along the longitudinal axis above their boundary velocities. This gives rise to the higher-grade factors of temperature, light and energy out of which upwardly streaming magnetism springs forth from the spiritual embryos, the vitamin-molecules mentioned at the beginning. These are suspended in a delicately balanced state of equilibrium in the media of air and water and await the naturalesque motive impulse in order, as refined subtle matter, to **transform** themselves into formative, multiplying and ennobling retro-influent energies. This will signify the end of the present shortages of food, raw material, germinating substances and fuels, and instead of capitalism and bolshevism a true socialism will arise about which Christ preached 2,000 years ago, who taught of the **transformation** of matter into spirit with the aid of the above form of motion. [The Energy Evolution - Harnessing Free Energy from Nature, Magnetism - Electricism]

These opposing executive forces are to be found in *statu nascendi* in every solid, liquid and gaseous (air) medium and in the highest-grade transitional state in the vitamin-molecules of the air and water, where they await the liberating motive impulse so as to be **transformed** into life-affirming magnetic or predominantly life-negating electric fuel concentrates (ions). The forces involved in these metaphysical **transformation processes** are in the ratio of 96% : 4%. The predominant force in this process can either be the up-building,

formative motive force or its decomposive counterpart. Whichever force is subordinate, down to a minimum of 4%, provides the resistance required for all types of motion. Everything is ordered through the agency of 'magnetolytic' or 'electrolytic' processes of dissociation. Both energetic processes are of almost equal value, but differ only in function. [The Energy Evolution - Harnessing Free Energy from Nature, Magnetism is the Function of Levitism and Electricism is the Function of Gravitism]

Up to now we have therefore been forced to use flowing electricism for the purposes of generating low-grade power, light and temperature (heat). As a result, the essential formative and uplifting force - magnetism - was relegated to the subordinate role of providing the resistance necessary for all motion. That this resistance to motion must increase by the square of the initiating rotational velocity that produces it, is readily understandable because it concerns the development of metaphysical fuels, for which the force of resistance required for the acceleration must increase concurrently and proportionally. For this reason the 'crowning law' (the Conservation of Energy Law) of today's technology is fallacious inasmuch as the supposedly quiescent magnetic resistance to motion can be **transformed** into a 'flowing' magnetic motive force and conversely, pernicious electricism can be **transformed** into the aforesaid supportive force (resistance). The means to achieve this is the Repulsator (see figs. 24-26) or the Repulsine (see figs. 30-33), which have hitherto remained unknown. [The Energy Evolution - Harnessing Free Energy from Nature, Magnetism is the Function of Levitism and Electricism is the Function of Gravitism]

between two basic substances). This is how the highest-grade element of matter, the floating vitamin-molecule, is created. While it contains too much raw material to be able to float upwards of its own accord (autonomously), it nevertheless does not gravitate, because it is already endowed with strong levitational forces. Indeed in this state, and after the loss of the higher-grade heat- and light-creating forces, it only requires a slight invigorating (cooling) impulse to **transform** such a mass of ennobled matter into the relatively highest light- and temperature-less state. [The Energy Evolution - Harnessing Free Energy from Nature, Magnetism is the Function of Levitism and Electricism is the Function of Gravitism]

A small, temperature-increasing, material or physical axial->radial impulse suffices to **transform** such a concentration of highly critical threshold matter in a latent state into the relatively most powerful, destructive energy, whose decomposive force increases in proportion to the strength of the impulse. Thus, for example, a lightning-like recoil in the form of a descending ion is triggered, which with elemental ur-force disintegrates the resistance that brakes its lightning descent. [The Energy Evolution - Harnessing Free Energy from Nature, Magnetism is the Function of Levitism and Electricism is the Function of Gravitism]

put it bluntly, instead of being radially->axially wound up, the ur-works were wound up like a clock-spring in the opposite way, i.e. axially->radially. To date this false 'winding' has been taught and learnt in all schools and preached from all pulpits. Only the Catholic Church, if merely symbolically, has indicated the naturalesque way to **transform** high-grade matter into Spirit (energy). However they were unable to recognise the truth, because they believed and also fostered the belief, that after death the earthly remains of fatty-matter, out of which allotropic threshold substances - vitamin-molecules - come into being, decay into dust and ashes. Therefore, due to electrolytic processes of decomposition (unnatural form of interment), the metaphysical fat-concentrates cannot come into being, which are the source of spiritual energy that makes all life invincible, free and independent. Perhaps this was considered undesirable so as to ensure the docility of slave-workers by spiritually castrating them through suppression of the build-up of quality substances, thereby making a constant supply of working oxen available. [The Energy Evolution - Harnessing Free Energy from Nature, Magnetism is the Function of Levitism and Electricism is the Function of Gravitism]

"In the outbirth of water we have to differentiate between two different kinds. Namely water as a carrier-substance that contains predominantly negative potentialities (substances attuned to earth frequencies) or predominantly positive potentialities (substances attuned to air frequencies). The former are to be viewed as upwardly-impelling geospheric instrumentalities and the latter as downwardly-impelling atmospheric instrumentalities. The former refine and exalt the higher-grade constituents, i.e. they serve the build-up of levitative potencies. The latter serve to cleanse the atmosphere of suspended matter, which as threshold substances still possess too little self-weight and too high a quota of levitative essences and can neither rise nor

fall. It is these **threshold substances** that can be **transformed** and **exalted** through **cycloid-space-curve motion**. From a practical point of view, this is only possible through their **co-oscillation** with their respective **carrier-substances**, be it **air** or **water**. This leads to a **build-up** of those **substances** incapable of further **development**, resulting in a renewed **intensification** of the **differences** in **potential** through the **spacial separation** of the **difference-substances**. The end **result** is an **increased motive force**. This explains the **concept** of **perpetual motion** in its most **natural sense**." [Viktor Schauberger, Implosion Magazine, No. 118, p. 8.] [The Energy Evolution - Harnessing Free Energy from Nature, THE NATURE OF WATER - ITS CONDUCTION AND USE FOR TRANSPORT]

The **energy** that can be gained through **bio-dynamic motion** manifests itself in an **increase** in **tractive force** and **carrying capacity**, which appear primarily in the **pipe-axis**. Here the **water** is **densified inhomogenously**, because its contained **gases** are **transformed** into **non-spacial dynagens**. [9] As a **result** the **core-water surges** ahead like a **ball of energy** with **increasing velocity**. [The Energy Evolution - Harnessing Free Energy from Nature, The Transport of Ore in Double-Spiral-Flow Pipes]

[9] **Inhomogenously**: Since some of the **water's gases** are **transformed** into a **non-spacial state** through **densation** and the remaining **water** is **densified** through **cooling**, two different **states** of **densation** exist and therefore the **water** is **densified inhomogenously**. Similarly, despite the overall **cooling** of the **water**, the **peripheral flow** are always **warmer** than the **central core**. - Ed. [The Energy Evolution - Harnessing Free Energy from Nature, The Transport of Ore in Double-Spiral-Flow Pipes]

This **product** of **synthesis** is characterised by the fact that the **ratio** between **oxygen** and its **carbone counterpart** is 4% : 96%, because all the remaining **oxygen** has been **transformed** into **fertilising substances** and then **bound**. Therefore the new **product** of **synthesis** has the highest **negative valency** and is of **geospheric character**. Certain **factors** relating to these **processes** should be noted: In the **scientific synthesising process** **heat** has a **shrivelling effect** on the decisive **formative substance** in its **nascent state**, while **physical pressure ruptures** its **outer envelope**. In the case of **coal liquefaction** by means of **cold flows** the **increasing cooling** on the **developmental path** acts to **increase** the **potential**. However, since the **increase** in the **potential** of the true **formative substance** is of a purely **energetic nature**, it would be unable to break through the **outer envelope** had this not been **mechanically abraded** through the **circumvolution** and **inner rotation** (gyrate within and about itself) about itself and its own axis) caused by the **increasing frictional pressure** arising from the doubly **increased velocity** of the whole **water-body**. These **differences** demand the closest **attention** and **consideration**. The **product** of **synthesis** obtained by means of **cold flows**, **binds** itself into its own **waste product** (**juvenile water**). Therefore apart from a new, fresh and more highly cultured **energy**, an associated **carrier-substance** of the **highest order** is also created at the **expense** of the gradually **transforming** (**internally reconstituted**) **stocks** of old **water**. This **two-fold transformation** represents the **increase** and the **qualitative improvement** of what has been **quantitatively increased** (the **growth** of **water**). The finished **product** is a crystal-clear **water** that has neither **taste**, nor **smell**, nor **colour**, because in this **product** of **synthesis** all kinds of things are on the loose or have been **loosed** (**emancipated**), i.e. they have been raised to the [The Energy Evolution - Harnessing Free Energy from Nature, The Liquefaction of Coal by Means of Cold Flows]

If this **product** of **synthesis**, almost exclusively **composed** of **geospheric energies**, is **atomised** and **atmospheric oxygen** simultaneously **infused** through **nozzles** (viz. other **forms** of **fertilisation**), thus **charging** it with **fertilising substances** (these become **passive** at high **centripetal velocity**) and if this whole **mixture** is lightly **compressed** (**warmed**) by a **descending piston**, then the **mixture** is **instantaneously transformed** into the next **higher state** of **development** or **aggregation**, namely into **air**. [The Energy Evolution - Harnessing Free Energy from Nature, The Liquefaction of Coal by Means of Cold Flows]

That this tremendous **pressure** expresses itself **silently** requires no special comment. That, as a **high-grade air**, this **product** of **transformation** has a more beneficial **effect** on the **environment** and **development** generally than the **waste matter** of **explosive processes**, also goes without saying. That this **high-grade product** of **transformed air** does not **smell**, is without doubt. In this way what was striven for has been achieved, namely a far higher exploitable **pressure** than is **produced** by any **form** of **petrol** (**gasoline**). Moreover, it is an **incombustible pressure-creating substance** that neither (**stinks** nor **creates a din**), and its beneficial **effect** can be

raised to any desired [level](#), so that in [practice](#) the smallest [quantities](#) are enough to achieve any desired [effects](#).
