

# upsuctional force

## Schauburger

The product of this [involuting motion](#), which always [converges](#) to a [point](#) while at the same time [curling](#) in upon itself, is [biomagnetism](#). That it is also contingent on the presence of [catalytic influences](#) will not be further discussed here. As such, [biomagnetism](#) extends itself [longitudinally](#) and [radiates](#) its [surplus energies vertically](#) and, for example, draws the [trout](#) along in its [wake](#). The [trout](#) can so regulate this **upsuctional force** with its [gills](#) that even its [motionless stance](#) and equally well-known mastery of [gravity](#) becomes understandable in the light of the above. The [weight](#) of physical [masses](#) only exists in the [atmospheric living space](#). Above this the [force of levitation](#) prevails as [inverted gravitation](#). Consequently, all [pressure-](#) and [heat-intensifying motion](#) must inevitably function all the more irrationally, uneconomically and [development-impedingly](#), the more it is [accelerated](#) and [strengthened](#). To this end raw materials are squandered to such a degree that a growing dearth of them is unavoidable. [[The Energy Evolution - Harnessing Free Energy from Nature](#), [The Biological Vacuum - The Optimal Driving Force for Machines](#)]

The simplest effect of [catalytic opposites](#), i.e. [fine-structured opposites](#) with [inner interuniting properties](#), or more properly having a 'marrying' tendency ([ur-procreation](#)), can best be observed in the [generation](#) of [electric current](#), which is normally only successfully achieved with so-called [dynamos](#) incorporating [rotors](#) made of [paramagnetic metal](#).

Conversely, if [diamagnetic catalysts](#) are used in [dynamos](#) constructed in exactly the opposite way (so-called [Repulsators](#) - see fig. 7 & figs. 24 ->26), then an [upward flowing diamagnetism](#) is produced, which viewed biologically is to be understood as 'levitation' ([resurrective](#) or **upsuctional force**), during which the follow-up [pressure](#) mentioned elsewhere plays a subordinate role. If the [developmental process](#) is initiated in [reverse order](#), where the [pressural components predominate](#), then super-strong [gravitational forces](#) are freed.
