

ur-procreation

Schauberger

The simplest effect of [catalytic opposites](#), i.e. [fine-structured opposites](#) with [inner interuniting properties](#), or more properly having a '[marrying](#)' tendency (**ur-procreation**), can best be observed in the [generation](#) of [electric current](#), which is normally only successfully achieved with so-called [dynamos](#) incorporating [rotors](#) made of [paramagnetic metal](#).

Conversely, if [diamagnetic catalysts](#) are used in [dynamos](#) constructed in exactly the opposite way (so-called [Repulsators](#) - see fig. 7 & figs. 24 ->26), then an [upward flowing diamagnetism](#) is produced, which viewed biologically is to be understood as '[levitation](#)' ([resurrective](#) or [upsuctional force](#)), during which the follow-up [pressure](#) mentioned elsewhere plays a subordinate role. If the [developmental process](#) is initiated in [reverse order](#), where the [pressural components predominate](#), then super-strong [gravitational forces](#) are freed. [[The Energy Evolution - Harnessing Free Energy from Nature, The Catalysts](#)]

Conversely, this means that the [generation](#) or **ur-procreation** of [naturaesque differences actuates naturalesque forms](#) of [motion](#) through which, for example, '[evolution](#)' can be [formed](#) and [fashioned](#) in countless ways. [[The Energy Evolution - Harnessing Free Energy from Nature, The Liquefaction of Coal by Means of Cold Flows](#)]
